COMPUTER & VIDEO GAMES

The background of the entire page is a vibrant, comic-style illustration. It features a woman with voluminous, wavy blonde hair and a determined expression, wearing a light-colored, form-fitting outfit. She has multiple arms, some of which are holding various objects. In the foreground, a large, close-up face of a creature with red skin, large eyes, and a long, purple, forked tongue sticking out of its mouth. The creature's face is partially obscured by the woman's figure. The overall style is reminiscent of 1980s pulp magazine art.

EXPAND YOUR VIC

From
£85
plus VAT.

ARFON PRINTER

A low cost stand alone printer which will be almost essential for your larger programs will be launched in the Spring of 1982. The power plug for this unit is already on your expanded system.

EXPANDABLE TO 7 CARTRIDGES

You will now be able to use up to seven cartridges to expand from your basic Vic 20. These can include RAM memory expansion up to nearly 30K of usable memory, ROM cartridges with packaged programs, user expansion cartridges, printer software, disc software, RS232, IEEE interface, line expansion firmware and many others - besides of course all your games cartridges.

ARFON EXPANSION MEMORY

Immediately available from Arfon in cartridge are 3K RAM + 2 sockets, 8K RAM, 16K RAM, 8K ROM, 16K ROM. Also a basic Vic simulator cartridge to allow tape and cartridge use without altering the system.

VIC 20 Expansion System

The Arfon Vic 20 Expansion System is a finished metal unit that integrates your Vic 20 with an expansion board for up to seven cartridges and a toroidal power supply (fully enclosed) to give you sufficient power for any expansion and also to power the Arfon Vic Printer. Your Vic and its screen modulator are incorporated into the expansion system to produce one unit and there is an optional lid that covers the expansion area and allows your TV to sit on top. Access to the various input sockets on your basic Vic 20 is not restricted while it is in the expansion unit.

Stocks are available now through your own Vic Dealer

INTERFACES

Slots have been left to allow normal use of the cassette socket, disc socket etc., which will still run normally with your expanded system.

CONTENTS

NEXT MONTH

OUTWIT unknown human opponents in a fantasy world adjudicated by computer. Games moderated by computer are ripe for take-off in the U.K. In May we will give you a rundown on the no-holds-barred computer moderated games scene where you have to stay on the alert even when you're not playing!

WITH Packman games crapping up everywhere, we felt it was time we featured one ourselves. Meteor Storm, Earth Port II, Spiderman and Anti-Gravity Flyer also feature in an issue packed with the best games.

JUST how far can you expand a Sinclair's memory? Who produces the top games software for it? What peripherals are available? Our May Hardcore section is given over to the possibilities of this unique machine.

VIVE LE SINCLAIR

Dear Mr Editing-Person, I'll start by saying what a fab piece of material your mag is. Well thought-out, interesting, colourful, witty in places and highly entertaining to the last computer-packed page. Absolutely wizard and all that.

But may I outline one slight fault... so far you have only published small, rather feeble UK Sinclair ZX81 games. I know the ZX81 cannot be described as the greatest personal computer but give it some credit, please.

If it's not too much for your megalomaniac brain to manage, could you print an exciting, highly interesting and graphically stunning 16K Sinclair game which will be a credit to all ZX81 owners and will prove to other more advanced computer owners that it's more than a child's toy.

Everyone knocks the ZX81 but I think other computer manufacturers should follow Sinclair's example and produce a basic, low-cost and compact machine which can be expanded to be more powerful through the addition of plug-ons, like memories, keyboards, sound systems etc. Peter Townsend
Walnut,
Kent

CLUBBING TOGETHER

Dear Sir, We would be most obliged if you will let your readers know that a computer club has been started in the Hartlepool area, via your Mailbag pages.

The first meeting of the club was held at The Wellare Hall for the Blind, Avenue Road, Hartlepool

on Friday, February 26. Mr Harry Cuthbert is the acting chairman and Mr David Jones the acting sec, both can be contacted most evenings after 6.30pm on Hartlepool 71027 or 66001.

It is hoped that anyone who has an interest in computing will join the club, non-owners are also most welcome.

David R. V. Jones,
Hartlepool,
Cleveland.

IN BLACK AND WHITE

Dear Sir, I would be grateful if you could help me with some information. All the computer chess games advertised seem to work on boards and pieces are supplied.

Have you any knowledge of a straightforward chess computer i.e. to cater for the persons like myself who already own a chess board and pieces. Ronald Whiteside,
Lismashatragh,
Belfast

Editor's reply: The only computerised chess game on the market which you can use your own chess board and pieces with is made by Ace at Wembley. The actual computer looks very like a pocket

calculator and the moves made are displayed on a small L.C.D. screen. You just position your pieces accordingly, it's official name is Acetronic Electronic Chess and costs £24.95 from Ace distributors. For a full list of dealers contact Ace at 3 Fulton Road, Wembley Park, Middlesex.

GETTING IT TAPED

Dear Sir, I want to use a Sinclair pre-recorded tape on my Sharp MZ-80K computer. As the Sinclair ZX81's are simple machines I thought it would accept it, but it wouldn't load.

Could you tell me if it is possible to load these cassettes on to my machine and what I should do to make it work?

I look forward to the next issue of your magazine and hope you don't forget the Sharp MZ-80K. P. Alsen,
Stockton Lane,
York

Editor's reply: First the good news Mr Alsen, we will continue to feature the Sharp MZ-80K in the magazine. Now the bad news. You can only use cassettes which contain programs specially written for the Sharp with an MZ-80K. There is no way to

convert your Sinclair tape to load, so I'm afraid you will have to either buy a Sharp games tape from a supplier or have a go at writing your own games.

CHEAP AND CHEERFUL

Dear Sir, I am in the process of purchasing a Sinclair ZX81 and would like to know whether or not a cheaper 16K RAM is available for it other than the Sinclair one?

I would also like to know if 16K is the limit of the ZX81's memory? If not, I'd like some details please.

I own a JVC T.V. cassette radio set and could you tell me if I can use it in conjunction with the ZX81 for the T.V. and cassette facilities? I would also like to know if the ZX81 can have sound facilities. V. Buchanan
Dollan,
Scotland.

Editor's reply: There are a couple of firms who supply 16K RAM packs for the Sinclair ZX81 which cost less than Sinclair's own version. These are: Audio Computers of Southeast-on-Sea which costs £33. Byg Byte of Petersfield, Hampshire which sells one for £42.95.

Expansion boards are available for the ZX81 right up to 128K. Audio Computers is the firm setting that, and smaller memory boards: 32K, £45; 64K, £73; 128K, £123.

I'm afraid that your JVC is not one of the cassette recorders Sinclair Research recommends. I suggest you write to Sinclair and they will give you a full list of ZX81 compatible cassette recorders.

Alternatively, you could wait until we publish our next issue (May) when we will be featuring the ZX81 in our Hardcore pages giving details of peripherals available.

ZX 80/81 HARDWARE/SOFTWARE

ZX KEYBOARD

Now with Repeat Key

A full size keyboard for the 80/81. The keyboard has all the 80/81 functions on the keys, and will greatly increase your programming speed. It is fitted with push type keys as in larger computers.

The keyboard has been specially designed for the Sinclair computer and is supplied ready-built. It also has facilities for 4 extra buttons which could be used for on/off switch, reset, etc. £27.95

4K GRAPHICS ROM

The 4K Graphic module is our latest ZX81 accessory. This module, unlike most other accessories fits neatly inside your computer under the keyboard. The module comes ready built, fully tested and complete with a 4K graphic ROM. This will give you 448 extra pre-programmed graphics, your normal graphic set contains 64. This means that you now have 512 graphics and with there inverse 1024. This now turns the 81 into a very powerful computer, with a graphic set rarely found on larger more expensive machines. In the ROM are lower case letters, bombs, bullets, rockets, tanks, a complete set of invaders graphics and that only accounts for about 50 of them, there are still about 400 left (that may give you an idea as to the scope of the new ROM). However, the module does not finish there; it also has a spare holder on the board which will accept a further 4K of ROM/RAM. IT NEEDS NO EXTRA POWER AND WORKS FROM YOUR NORMAL POWER SUPPLY £27.95

RAM 80/81

16K RAM

Massive add-on memory for 80/81.

16K KIT-A-KIT VERSION

of a 16K Ram. Full instructions included. All memory expansions plug into the user port at the rear of the computer. 16K RAM £32.95 16K KIT £28.95

2K & 4K RAM

Static Ram memory expansion for the 80/81. They both work with onboard Ram i.e. 4K plus onboard = 5K. This is the cheapest small memory expansion available anywhere. 2K RAM £14.95. 4K RAM £19.95

16K 81 SOFTWARE

As seen at the ZX Microfair.

DEFLEX This totally new and very addictive game, which was highly acclaimed at the Microfair, uses fast moving graphics to provide a challenge requiring not only quick reaction, but also clever thinking. One and two player versions on same cassette. £3.95

3D/3D LABYRINTH You have all seen 3D Labyrinth games, but this goes one stage beyond; you must manoeuvre within a cubic maze and contend with corridors which may go left/right/up/down. Full size 3D graphical representation. £3.95.

CENTPEDE. This is the first implementation of the popular arcade game on any micro anywhere. Never mind your invaders, etc., this is positively shining, the speed at which this runs makes ZX invaders look like a game of simple snap. £4.95.

Please add £1 p&p for all hardware, Software p&p free. Specify ZX80/81 on order.

ALL OUR PRODUCTS ARE COVERED BY A MONEY BACK GUARANTEE

MAILBAG

THE SEARCH FOR SPEED

Dear Sir,
 Congratulations for a new, excellent and very different magazine. The series on writing Adventure type games is superb and Round the Horn was the best program I've ever seen published for TRS-80.

I know you're more of a software magazine, but as yours is the only mag I buy regularly (grovel, grovel) I would like to ask a hardware question: I know the clock in the TRS-80 can be speeded up, but I'm not sure how and what components have to be bought. Could you tell me how or suggest where a kit can be bought? I want it switchable between old and new speeds for purpose of tape transfer. My set-up is TRS-80 Model I Level II 16K with cassette and Aculab. C. Bennett
 Bankin-of-Crags,
 Dumbies

Editor's reply: According to Martin Soble of Tandy Corporation's merchandising department, it is possible to increase the speed of the microprocessor in your computer itself but he does not recommend doing so. He told Computer and Video Games that a couple of small dealers sell kits to carry this out, but he likened it to doing a "hot rod" conversion on a car. It goes faster but wears it out more quickly.

So if you want your TRS-80 to last, take Martin Soble's advice, you will be better off in the long run.

NIBBLERS NIGGLE...

Dear Sir,
 Having tried out the Nibblers program in the first edition of Computer and Video Games, I found that I could not fire missiles or drop bombs on the Nibblers I am new to computers and so would not know where to start

looking for the fault. My friend's father, who deals in computers, was also puzzled by this. I would be very pleased if you could assist me to solve the problem.

E. Bryant,
 Hazby,
 York.

Paul Jay replies: There is, in fact, no fault in the Nibblers program. The trouble is that you have got an old PET.

Many of the memory locations have been changed since the original machine came out. The location that has been changed in this particular program is 151. When the machine looks at this part of memory, it can tell if a key is being pressed down. All you have to do to make the game work is to change the 151 which appears twice, to a 515. This will also be necessary if you want other PET programs to run on old machines. For example Dragon Druggin'.

THE RIGHT CONNECTIONS

Dear Sir,
 I have recently acquired a VIC-20 and after hearing from a friend about a connection to fit a normal tape recorder to it, I decided not to buy the £40 plus, special tape recorder. I asked in the shop my friend told me about and they said they were expecting some in soon. Impatiently I asked at another shop and they didn't know anything about it. Is the connection made by Commodore or by another firm?
 Nadeem Faruque
 Newton-with-Scales,
 Lancashire.

Editor's reply: A firm called Stack of Liverpool is in the process of bringing out an adaptor designed to link up a normal cassette recorder with the VIC-20, but has not yet brought it out.

But according to one of Commodore Business Machine's technical

experts the adaptor, which is expected to cost between £5 and £10, is only worthwhile if you have relatively small amounts of data to store if you can't afford the price of a Commodore recorder.

Commodore's expert did say that the quality of material stored using this adaptor would not be as good as a Commodore compatible because normal recorders record audio signals rather than NRZI signals — the method used to record computer signals.

Commodore itself does not make an adaptor to convert a normal recorder for use with the VIC 20.

SYSTEMS ANALYSIS

Dear Sir,
 As the proud owner of a ZX81, I would greatly like to expand it in all directions. However, the proliferation of add-ons, software and books too numerous to mention have reduced me to gibbering lunacy!

I would like to know how

far it is possible to enlarge the system capacity and capability. If the ZX81 possibilities are limited — without major surgery! — then I would seriously have to consider another system. I was horrified to see no less than 49 Sinclair ZX80/81's for sale on the transaction page of another magazine. Could it be that other ZX owners are losing heart? Help!!

Who makes the 54K RAM slot-in mentioned in your January issue?
 Chris Wilkes
 Harefield,
 Middlesex

Editor's reply: You can enlarge the ZX81 up to 128K memory using a range of expansion boards. Audio Computers is the firm to contact at 97 Bournemouth Park Road, Southend-on-Sea.

Here is a list of prices:

16K	£33
32K	£45
64K	£73
128K	£123

Audio Computers will be happy to give you further details of goods available for the ZX81 if you get in touch with them.

ITION COMPETITION COMP

THE PICK OF OUR PUZZLERS

The octagon puzzle which featured on the cover of our first issue, certainly set your grey-matter alight.

Over 700 entries of programs to solve the puzzle by computer, deluged our office and caught us quite unawares.

Whittling down all the entries was a long and difficult task for our judges but they have finally come up with the three best entries.

To give everybody a fair chance we laid down a set of criteria for the judges to use as a guideline in making their comments. Entrants could score a possible total of 45 points for the programs submitted, but no-one managed a 100% score.

The most important aspects of the judging were on the standard of programming. Exactly how concise the programming was and whether it contained unnecessary frills into the entry.

Another important factor in judging was the speed each program took to find the solution. Highest marks went to those whose programs found the solution quickest. Further points were awarded if it proved there was only one solution.

The three to emerge as winners are Gordon Bennett of Hampshire, Adrian Womack of Doncaster, and Christopher Holt

of Gravesend.

Gordon achieved the highest score of 43, Adrian got a close 41 and several reached the 40 mark. Our judges finally selected Christopher Holt's entry as the third winner because it was the best presented of the three tying programs.

Congratulations to the three final winners and our commiserations go to the other unlucky hundreds who entered.

The winning program by Gordon was written for a Microtan 65 computer and earned high points because of its simplicity of execution and accuracy in programming. With his program listing he submitted documentation but none of it was in-depth details about converting symbols to numbers or letters. You also didn't have to sit and wait for a long time for the program to do something, which was a common complaint.

Another interesting feature of this program was that instructions were explained in the program itself, making it easy to use. The solution was found in one minute 44 seconds.

The other two winning programs were of an equally good standard of programming finding the solutions quickly. But they fell down on other points, particularly presentation. They were written for a Sinclair ZX81 and an Acorn Atom.

Three VIC computers will be winging their way towards the winners as soon as possible. We wish the winners hours of happy programming and also offer our thanks to the many judges for their time and effort.

Confessions of a Bug

Just in case any of you out there weren't appreciating the work which we Bugs are putting in behind the scans here, I've persuaded the editor to give me my own column to explain.

Changing Hearts in the March issue was one of our biggest successes — made all the more so by the fact that many readers managed to enter it first time.

The listing itself was error-free but two all-important commas went missing from the accompanying write-up. Line 40 in the write up should read: GS = "ABDE,ABC,BCEF,ADG,BDEFHCF,DEGH,GHI,EFHI."

Alien Hunt in the February issue also caused some problems for readers whose Acorn Atom did not have sufficient of the necessary memory to run it. Unfortunately author John Kirk was all too quick to their rescue, suggesting that they remove instructions subroutine in line 1 and lines 32000 to 32111.

T. Hitch was put to work at the printers to give *Dogfight* fans a little extra workout on the Apple in the February issue. He transposed lines 1160 to 1190 out of position, which itself would have been easily righted, but then he cunningly continued with:

ITS="M(2);"MISSILES"

which belongs to line 1309.

Screaming Foul-up did the printing run for the March issue and pulled seven lines out of the *Air Attack* listing. The missing lines are:

2050 LP=0:K=0:GOTO 100

2100 FOR ZQ=1 TO 21

2105 ZX=ZQ*41+X+1:POKE ZX,20

2110 BN=PEEK(ZX+41):IFBN=32

THEN 2120

2115 GOTO 2200

2120 POKE ZX,32:NEXT ZQ

2130 GOTO 100

*your's
Mal*

BRAINWARE ANSWERS

The answer to our March Mind Routines problem is that there are 34 prime numbers. The highest is 95731 and the lowest is 13497. The total of the 34 prime numbers is 1842502.

The correct solution to last month's Nevera Crossword is printed right and the winners' names will be published in next month's issue.

For more puzzles to tax your mind turn to page 83 where you will find this month's problems.

- 84-way Euro-connect or plug and cable
- full operating instructions and manual

The disc controller is based on the Intel 8271 chip. This highly intelligent device minimises the amount of control software and memory requirement and so allows phenomenal high-speed operation. Both software and hardware have been rigorously tested and proved very, very reliable.

You will need an Atom with bus buffers and indirect edge connectors. The mail order price is £350 including VAT post, packing and insurance, the price at your Atom dealer £345.

If you do not have a dealer near you just write to us at the address below, or credit card holders can ring Cambridge (0223) 246200 and order directly.

Acorn Computers Ltd.,
Fulbourne Road,
Cherry Hinton, CAMBRIDGE

The disk operating system (DOS) decodes the following commands used to control the storage of files on disk —

- * CAT catalogue files on disk
- * LOAD load image of memory contents as file
- * SAVE save image of memory contents as file
- * DELETE delete file from disk
- * SPOOL store all printer characters on disk
- * EXEC read characters from disk as if from keyboard

The DOS also replaces the cassette operating system vectors as used by BASIC to allow the use of the following commands in Atom BASIC—

- LOAD load BASIC program from disk
- SAVE save BASIC program to disk
- FOU open file for output
- FIN open file for input
- SHUT close file
- EXT find extent of file
- PRT find value of pointer into file
- PUT put number to file
- BPUT put byte to file
- SPUT put string to file
- GET get number from file
- BGET get byte from file
- SGET get string from file

These commands provide full random access of up to 5 disk files simultaneously.

Scheduling ... Calculations ... Recalculating ... Erasing ...
Revising ... Critical Path Analysis ...
With ATOMCALC only £39.10 inc. VAT

What is it?

Atomcalc (as supplied as a plug-in 4K ROM with an off-purpose planning and modelling program. It is so easy to use. If you can use a calculator you can use Atomcalc. No programming skills needed.

The ROM creates an enormous grid of columns and rows like a ledger. All you do is to enter the headings and formulae once and Atomcalc does the rest. Supplied with a very detailed 30pp user handbook.

What will it do?

Atomcalc can cope with anything from a household budget to company accounts. You set up a series of automatic calculating functions like totalling or percentages. Then fill in the columns with your figures and the program produces the answers. If you wish to change one figure in the calculation it immediately changes the relationship of all the other figures involved. So, for example, you can see what effect on profit a 5% increase in sales might have or a 10% increase in production, or a 3% drop in transport.

And do not forget you can print them out on an optional printer or store them on tape.

How Can I Buy One?

Go to your Atom Dealer, or if there are none in your area just send a cheque for £39.10 (incl. VAT and P & P) to the address below. Credit Card holders can ring Cambridge (0223) 246200 and order direct.

Dept 6 Acornsoft Ltd, 4a Market Hill, CAMBRIDGE

ACORNsoft

Brand new colour board
NOW YOUR LIFE CAN
BE MORE COLOURFUL!

£39

The board fits inside the Atom and generates colour output suitable for all makes of monitors and TV's.

Two colour palettes can be achieved Red, Yellow, Green, Blue and White, Cyan, Magenta, Orange. In text modes this provides green on blue or orange on black displays.

Three outputs are provided:—

- Red, Green, Blue drives at TTL levels with a composite sync, the polarity of which may be link selected.
- A 1v composite video in monochrome only.
- A PAL encoded signal on Channel 36 suitable for feeding into the aerial socket on a domestic television.

You can fit the board yourself using a fine soldering iron or your dealer will fit it for you. The board can be used in a minimum Atom with the existing power supply, or if used in a maximum Atom a 5V externally regulated supply will be necessary.

Available from all Acorn Dealers or direct from Acorn at £45.24 inc VAT and p+p. Credit card holders can ring (0223) 246200 and place their orders direct.

KEEP THE ASSASSIN'S KNIFE AT BAY

Being the President of a small state can cause you a few problems. Often your country is on the brink of civil war or revolution.

But as the head of the state your job is to ensure the smooth running of political life and aim to achieve prosperity for your people.

That's just what you have to do in Dictator, an adventure game for the ZX81 in 16K.

The object is to prevent your people revolting. At your disposal are the army and secret police who you can use to your advantage if the threat of a coup arises.

You must be vigilant because spies may infiltrate your close knit party. Assassination attempts are regular events.

To keep the people happy you have to make the right decisions

DICTATOR

to maintain a secure economy. If you fail unrest could mean your ultimate downfall.

An eight page instruction booklet is supplied with the cassette giving full information.

A copy of Dictator can be bought from Bug-Byte for £5

DEADLY BLADES IN THE NIGHT

Deadly blades flash as you relive the duelling days of the eighteenth century in a darkened dungeon.

You must kill your opponent after searching him out in Duel in the Dark, a game for one or two players.

The screen is divided into a rectangle of squares which forms your battleground. It represents a dungeon which has two windows. But you can't see anything because it's dark outside — none too helpful.

The only good thing is that your opponent faces the same headlock — he can't see you either.

Objects litter the dungeon which are hazardous but also give you clues to your opponent's whereabouts.

Both of you are given a dagger and a knife as weapons in the two player version. If it's in

DUEL IN THE DARK

single player mode the computer takes the role of a bear seeking you out.

During play you discover information about the dungeon's layout — making notes of the location of windows, doors, objects and walls.

When the crunch comes you have three methods of doing away with your opponent. Either throw the knife at him, stab him with your dagger or grab him and grapple him down.

Duel in the Dark costs £10.93 from Baxhill based Molimax and is designed to run on a TRS-80 level II.

FACING THE GALACTIC WAR FLEET

SPACE FIGHTER

Alone in deep space, dark as space you come face to face with a horribly bewinged and decidedly unfriendly galactic war fleet.

With the stars your only company your mission is to find and destroy five enemy fighter craft. They patrol different sectors of the sky and when they are within range you line them up in your sights and blast them. Your armament consists of laser guns which instantly reduce the enemy ship to fragments of space dust.

The fighters are equipped with missiles and can return rapid fire at your ship so you have to avoid destruction.

Space Fighter is a re-vamped version of the original game and now runs on a TRS-80 Colour Computer. Molimax the supplier, claims the game lends itself to colour graphics which make it more realistic.

You need joystick and 16K memory as well as £10.05 to get the game up and running.

HERE'S THE LATEST IN BRAINWARE

A band of roving aliens are scanning the universe for humans with the decidedly unfriendly aim of taking out their brains and replacing them with microchips. What do you mean you know someone they found already?

Your task is to defend your ship from the aliens and escape the gravity beam which has sucked your ship into the alien cruiser's flight path.

It is during a reconnaissance mission that your android Fred spots the alien ship and warns you of their intentions.

Your adventure leads you

ADVENTURE C

through space into all sorts of hazards. You explore computer rooms, an android pleasure room, penetrate force shields and fend off laser guns.

Adventure C makes full use of the Sinclair ZX81's 16K memory packing in as much as possible. Arctic Computing in Hull is the supplier and will sell it for £9.

Arctic Computing is establishing a series of adventure games which are written in-house in machine code for speed.

MICROTANIC'S TAPE TRIO

In the last issue of Computer & Video Games, the cassettes for Tank Raid, Six Keys of Tangrin and Tanian Adventure were attributed to the Tangrin User Group (TUG).

In fact, these games are supplied and distributed for the Microtan 65 computer by Microfonic Software of Dulwich in London. Tanian Adventure and Tank Raid run in 16K and The Six Keys of Tangrin in 8K.

NEW PRODUCTS NEW PRODUCTS NEW PRODUCTS NEW GAMES NEWS

GIVING THE CUBE A NEW DIMENSION

That most frustrating of puzzles Rubik's Cube is maintaining its popularity with the arrival of two computerised solutions.

A game to help you solve your cube on your screen without any of the thumb twiddling is now available for the Texas Instruments 99/4A computer.

Stuck to the original concept dreamed up by Rubik the game allows the player to simulate every possible rotation in order to solve the Cube. If you find it all too mind-blowing you can always save it on tape and pick up where you left off later after giving your addled brain a rest.

Another feature of the simulation enables the player to spin the cube to see the reverse sides.

But for those of you who can solve the Cube in 30 seconds flat, there's always the Quadcube.

The sinister sounding Quad

RUBIK'S CUBE

cube has a four-by-four grid so there are even more combinations to puzzle over.

To cope with the complexity the program uses special commands allowing up to 30 moves to be stored for scrambling or unscrambling whenever the user wishes.

Work Force of Luton take the blame for any extra frustration this might cause you. And if you part with £9 you can take on the Quadcube.

THE GAMBLERS' GAME ON THE SMALL SCREEN

BACKGAMMON

The joys and frustrations of Backgammon come to the small screen with this computerised version.

The game, beloved by the gambling fraternity, is well suited to computerisation and makes a capable opponent.

There are six strategies to choose from and the computer soon latches on to your attempts to defeat it.

The makers, Future Software, claim the game has a fast response time as well as a high standard of play. When you make a move the computer brain automatically checks it is valid

if it's an illegal move the computer will tell you so.

A special feature of the game is a tumbling dice effect represented by a graphics demonstration. A full instruction sheet and rules of Backgammon come with the program, which is written for the Nascom and costs £6.95 from Future Software of Chalfont.

For the uninitiated, Backgammon is a simple race game, with two players trying to be first to move into the home section and off the board. But counters left alone can be returned to the start by an alert opponent.

CASSETTE TWO

A BUMPER PACKAGE OF 10

A bumper package of games to jolt your brain into action comes in the shape of this tape for the ZX81.

There are 10 games, Othello, Awari, Laser Bases, Word Mastermind, Rectangles, Crash, Roulette, Pontoon, Penny Shoot and Gun Commend.

Each of the games on the tape is explained in the accompanying leaflet plus loading instructions. You'll need a 16K machine to run the games tape which is simply called Cassette Two.

It's the second cartridge in this range produced by Michael Quinn of Willesden, London, and sells for £5. Copies can be obtained from him by mail order.

MEETING METEORS HEAD-ON

Cosmic Zap is one of the latest in a batch of Sharpsoft games for the Sharp MZ80-K computer.

You are fighting against time — 10 minutes to be precise — and your job is to survive an asteroid storm while destroying aliens at the same time.

Points are scored for each object you destroy and there is a

COSMIC ZAP

facility for the five top scorers to be put into the memory.

The asteroids can be deviously manœuvring. Without warning the alias you think you are ramming, fly into your flight path and on face transforms into one

of the deadly asteroids.

Another feature of the game is the mother ship, which makes an appearance after 10 minutes of the game. The mother ship could be your saviour because it has a device which your ship can use for docking purposes.

Cosmic Zap is on sale from London based Sharpsoft for £5.85.

THE VIC NEEDS VIC REVEALED

NEW PRODUCTS NEW PRODUCTS NEW PRODUCTS GAMES NEWS

VICMEN

GHOST OF A CHANCE

VIC software is at last hitting through to owners of the long-suffered machine and Bug Byte has leapt in quickly with some games.

Kicking off the range is Vic man, the VIC version of the popular arcade game Pacman. Bug Byte says this game is a very good copy of the original with lots of little mazes and a "glooper" who runs around the maze devouring dots as he goes.

Fruits appear in the maze where you amass a certain number of points and large fleshing dots cause the mazes and glooper to change color. Some times the mazes are in a consumable state and it's then that they run away from the glooper, but be careful, they may suddenly turn tail and turn in pursuit of you.

You are only given three lives so you must be careful manoeuvring your glooper along the paths of the maze. If you run into a ghost, your life is lost as he gobbles you up.

When you eat one of the ghosts a pair of flashing eyes darts back to the centre of the screen. You can use either joysticks or keyboard controls to run the game, depending on your own preference.

The screen has to be cleared of all the dots to earn a new one and a new fruit to consume.

The colourful VIC is well suited to reproducing a good replica of this absorbing and addictive game.

Vicman runs on the unexpended VIC and costs £7 from Bug Byte of Liverpool.

OUTPOST

BEWARE THE CRUDS!

The Kamikozicruds are one of the most hostile species to be found in space — like Vogons — except without any literary pretensions.

You only have two types of weapons to call on to defend yourself when you come across them in Outpost.

They are a propulsion unit and

a meteor shield. Your square shaped ship has weak spots, particularly vulnerable to enemy fire.

Two hits on the same side of the ship spell death. One hit prevents the propulsion unit rotating the ship to that position. If you overwork the unit it will overheat and stop working.

Outpost is difficult to operate because you have to use eight keys to control the action. But once you have mastered the technique it proves a demanding game.

It runs on an Apple II in 48K and is available from Richmond based SBO Software for £16.95.

AND THE WORD WAS OOPS...

THE BIBLE

In the beginning was the word and the word was "oops".

That is, the word according to The Bible of Automate Cartography in its new game. Sticking to the firm's humorous line in games tapes The Bible takes you through 10 games programs on a journey along the well trodden path of the Old Testament. It kicks off with a game entitled Genesis, and then moves on to Adam and Eve.

Later on in the tape you can relive Moses' experience on Mount Sinai and deliver the 10.

Copies are obtainable from Portsmouth based Automate and costs £5.00. It runs on a Sinclair ZX81 in 1K.

A HARD RAIN'S GONNA FALL

A deadly rain of missiles is falling on your cities. You must save them from destruction.

The Acorn Atom version of the popular arcade game Missile Command is included on the latest Acornsoft package.

You get three ground bases to form your defence sites. Aim your fire at a marker cross which you position on the screen using any key on the keyboard. Each letter and number key has a location mapped on to the marker cross corresponding to a memory site.

MISSILE BASE

The cross will move to the appropriate spot that the depressed key represents. As you can guess it takes a while to work out and memorise exactly where the cross will land up.

You can also select the top or bottom area of the screen as your target area and can swap them at will by pressing the

space bar. The enemy's fire will destroy your bases if you do not stop them in mid-flight.

Missile Base forms the major game on Games Pack 11 accompanying a version of snooker and traditional dominoes. Available from Acornsoft at Cambridge for £11.50.

TV GAMES CENTRES TV GAMES CENTRES TV GAMES CENTRES VIDEO SCREEN

BEST SELLERS

THE MONSTER FROM OUTER SPACE

A bright red monster from space is still tormenting Philips 87000 owners up and down the country, causing widespread frustration and havoc.

Running riot on video screens is Space Monster, which was recently topping the sales figures for Philips. The game is a space invader spin-off but with additions which demand some quite different tactics from the player.

The space monster itself lurks at the top of the screen behind a bank of robots which form the main part of the tentacled blob's attacking force. Each robot is equipped with a cannon from which he hurls down bombs and a shield which he can use for protection. It sounds quite impregnable but the robots' weakness is that their shields must be held to one side for them to fire.

A tank is your means of attack and defence. You have three reserves and three shields to

hide behind. Whenever the blob or his robots score a direct hit on the player's tank it turns him into a little human creature skating to find refuge behind a shield. Each time he needs another reserve tank one of the shields disappears from the screen, leaving the player more open to enemy fire. If he is hit while tankless the game ends in victory for the Space Monster.

Space Monster is the closest Philips has come to a space invaders' type game.

But it does have some innovations all of its own which make it attractive to would-be buyers

The blob is quite obviously a thinking creature and a capable dodger of the player's missiles. It also has a mean streak which will send him hurtling down from the top of the screen to finish the player off, if it senses victory — much more interesting than the unthinking invaders.

The two different varieties of monster also make a change from the usual green meemies and their numerous imitations.

The Space Monster Videopac is available from 67000 stockists and costs around the £15 mark. A worthwhile alternative to the classic game.

SAVE THIS POOR SOUL'S NECK

HANGMAN

Save a soul from transcending into the stratosphere simply by using your brain to unravel one word.

The game Hangman which has long been a great favourite with schoolchildren has now been transferred to your video screen.

This game for the Interton VC4000 follows that old guessing game popularised years ago. The computer selects a word which the player, or players, must try and guess.

Quick thinking is also important in this game, because you must guess the right word before the men on the screen is hung. Each time you place a letter of the word incorrectly a section of a hanging platform and its scaffolding is added. Before you know it the entire frame of the scaffold has been erected in front of your eyes. The next stage is the completion of the victim's body itself.

Whenever you make a mistake in the formation of the word one limb of the convict is added. The game ends either when you have guessed the word correctly, in which case you emerge as the winner. Or, if you can't unravel the hidden word the poor unsuspecting victim meets a very untimely and unpleasant death.

Hangman is written in a 4K ROM cartridge and is produced by Hangmax for Interton. It is available through the firm's UK dealers ranging from Asda Supermarkets to high street specialist shops. Hangman's retail price is listed at £22.95.

THINGS THAT GO MUNCH IN THE NIGHT

Atari is following the current trend of producing cartridges based on the most popular arcade games.

The latest addition to be turned into video computer system form is 1981 success story, Pacman.

PACKMAN

Due out in distributors' shops in April, this version sticks closely to the original concept. You operate a circular mouth-opening creature which speeds along the paths of a maze, sometimes referred to as a house. Littered along the paths are small dots, each one representing points, for the hungry Packman to consume.

Other characters in the maze are ghost-like creatures which move out from a central square of the maze at regular intervals. These run around the corridors, sometimes chasing your gobbler and sometimes with you in pursuit of them, if you have managed to eat an energy pill.

Successfully chasing and munching a ghost, helps the player to score bonus points

These are displayed on the screen where the action took place. And a fruit is displayed at the centre of the screen which can also be consumed for extra points.

With every cleared screen a new fruit from the series, which is worth more points, appears within the labyrinth.

There are three lives for you man to play with during the game, and as play progresses the number of ghosts increases, making your life more difficult. The game continues as long as you keep your lives without being devoured by the ghosts. When you clear the maze of all the dots, the screen flashes up a new one.

Available from UK distributor Ingersoll this top of the range cartridge costs £29.95.

CENTRES TV GAMES CENTRES TV GAMES CENTRES TV GAMES VIDEO SCREEN

BAFFLED BY THE BLACK AND WHITES

BACKGAMMON CHECKERS

Two traditional board game favourites have been given a new lease of life through the video medium.

Checkers and backgammon have been transferred to the television set via the Interton VC4000 Video Computer system, for enthusiasts who cannot always find human opponents to play against.

Both are easy boards for the computer to display and combine simple rules with plenty of scope for tactical play so the computer makes a worthwhile opponent, even if it will have a tendency to play safe.

Checkers or draughts as it is commonly known, is displayed as a board and pieces and there is no deviation from the traditional rules. You can play either black or white — black goes first — and then try to out-think your computer opponent. Be wary of the computer if it appears to be offering up a sacrifice — it probably has something nasty planned for you.

As usual the opening strategy determines who ends up with the most kings and that is the player who will usually win the game.

Backgammon too keeps to the traditional rules but without the gambling element, it is not as skillful as the original. It will, however, help to sharpen up the player's skill at outmanoeuvring an opponent on the board. And it will teach beginners the folly of leaving an exposed piece in a vulnerable position.

For those of you who have never played the game, it involves moving counters around the board in the opposite direction to your opponent and trying to get yours home first — but if a counter is left alone it can be captured by your opponent and returned to start.

Those cartridges are available from retailers in the U.K. from specialist dealers and some large department stores. The retail price is £16.95.

BURN UP THE CIRCUIT

GRAND PRIX

Turbocharged cars are currently burning up the formula one race tracks — and now you can catch up with these high powered machines in this latest Activision game.

You sit at the wheel of a highly tuned turbo race car head up on the grid for a Grand Prix.

The circuit ahead is filled with numerous hazards which you must overcome with expert control of the Atan joysticks. Apart from avoiding other vehicles watch out for oil slicks. If you drive over them you're taking a risk and it could cause a multiple pile-up.

Manoeuvring the car round the circuit is tricky. Not only are there sharp bends to contend with, but you also have to drive your car over narrow bridges.

The race is run against the clock which means you must

combine speed with safe driving to come out on top.

Grand Prix is produced by Activision for the Atan Video Computer System and has good graphics and sound effects making the game more realistic. It sells for the standard price of £14.95.

● Philips' new concept in video games combining a television adventure with an actual playing board is to be unveiled this month.

Quest for the Rings, which featured in our March issue, is scheduled to be on distributors' shop shelves in April. A price is still to be decided but it is likely to be more expensive than the standard Philips Videopac price (£14.95).

TAKE THE TRENCH TO DARTH'S STAR

STAR STRIKE

Relive the final conflict of Star Wars against the Empire's Death Star when failure means your planet's destruction.

Take the role of Luke Skywalker on his do-or-die mission to blow up Darth Vader's giant men-made planet in Star Strike you have to guide your Star Cruiser through space, dodging enemy space fighters as you travel to the Death Star.

Missiles whistle past you and you must retaliate with the deadly laser guns positioned on your star cruiser. If you successfully navigate through the space hazards and reach the narrow trench, which you must fly along to destroy Darth Vader.

Expert flying skills are vital for success because the trench is lined with obstacles and filled with enemy fire. Use your photon torpedoes and manoeuvre your ship away from the attacking crossfire like laser posts positioned on the walls and floor.

Judge the distance from your ship to the trench carefully and when you approach the last few miles focus your sights on that single exhaust vent — the only weak spot in the trench.

If you've got an Intellivision, Star Strike is available from stockists now, the price is £19.95. Intellivision owners can also subscribe to a new newsletter produced by Advanced Consumer Electronics, which gives details of the latest cartridges and new developments planned for the Intellivision and Acornic MPU1000.

CHESS

Will a chess computer ever be able to take on a grandmaster and give him a challenging game? Well, maybe the masters of the game will become wary of the machines after reading the results of a fascinating experiment reported by grandmaster Raymond Keene in *Massacre* at Merano — his account of last year's world championship between Anatoly Karpov and Viktor Korchnoi.

After the match some of the positions from the eighteen games were put to Sci Sys Chess Champion Mark V, one of the strongest of the commercially available chess machines.

The results were impressive on a number of occasions the computer was able to improve on the play in the match. The following position occurred in game nine, with Korchnoi White.

Korchnoi has just played 41. Q-Nch and Karpov now replied 41... P-N3 and the game continued 42. Q-KB1 (forced to avoid mate on KN2), Q-B4ch; 43. K-R1, Q-Q4ch and white resigned after 44. K-N1, R-Q8 wins the queen). This win gave Karpov a 4-1 lead — draws did not count in the match.

It is hard to imagine that Black's play can be improved here, but in the diagrammed position Chess Champion Mark V, after about 30 seconds analysis, found the improvement 41... R-QB7!

This kind of move is difficult for a human player to perceive, since it pins Black's rook against his king, an action which tends to be avoided instinctively by strong players. In this case,

White again has to play 42. Q-KB1, to avoid checkmate and then 42... R-B8 wins White's queen, more quickly than by the line chosen by Karpov!

In the next position, Korchnoi — Black — with very few minutes left to reach the time-control on move 40 had hastily moved his queen to Q4. Karpov now has 35 minutes to make his next move but — probably to keep up the pressure on Korchnoi — he replied instantly and played 40. N-B1 to save his threatened knight.

Korchnoi now played 40... B-K5! With an irresistible attack on White's king knight pawn.

Karpov played 41. B-B4 and adjourned the game until the next day, but resigned without resuming — after Black's 41... BXXNP; 42. N-K3, Q-B6; 43. NxK, R-K7; 44. Q-Q1, QxBPch; 45. K-R1, QxN mate is one likely continuation.

Karpov's blunder in the diagrammed position gave Korchnoi his first win of the match.

How did Mark V handle the position? After 38 seconds' analysis, it found the far superior alternative 40. N-K2! Now Black cannot take the knight without losing his queen and white threatens 41. N-B4 which would fork Black's queen, rook and bishop, attack the queen pawn and defend White's own king knight pawn.

These and other examples clearly impressed grandmaster Keene, not least because of Karpov's decisive and accurate play throughout almost all the match.

The same machine scored a further success in a challenge

contest arranged against grandmaster Dr John Nunn — an extremely strong chess problem solver — at the end of a recent international tournament at Brighton. Man and machine were each set six difficult problems, selected by the vice president of the Problem Commission of the International Chess Foundation.

One of the problems was this prize-winning composition by the Soviet problemist L. Zagorjko, which appeared in 1972.

It is White to play and mate in four moves. Nunn was unable to find the solution to this extremely difficult problem, but the Mark V did so; in fact it found three solutions — an extremely embarrassing outcome since a problem is considered spoiled if there is more than one solution found.

As an indication of the complexity of this problem, the reader is invited to work out the analysis after the key move 1. R-K8!

For a computer to do this is impressive, but to find two other solutions was beyond the powers of the many problemists who have examined the position since then.

However, there is a considerable difference between analysing a problem position and playing a game.

The Mark V's achievements should not be taken to suggest that a grandmaster program is imminent, but they do show that in some areas of the game computers are already capable of more effective deep analysis than humans.

BRIDGE

BY ALAN HIRON

Here's how the Fidelity Bridge Challenger dealt with a recent band encountered during match-play.

Although the Mark II Challenger has the facility of generating its own random deals it seemed more sensible to try it out on an actual hand. This way you get a human comparison as well. This was the hand, dealt at love all:

North			
S K Q 9 8 7			
H Q J 7			
D Q 10 7			
C 3 2			
West		East	
S A 5		S J 10	
H A 10 9 4		H K 6	
D K 5 3		D A J 9 8 6 2	
C K Q 6 4		C A J 5	
South			
S 6 4 3 2			
H 8 5 3 2			
D 4			
C 10 9 8 7			

Setting the Challenger aside for a moment, if you were a bridge player, in what contract would you like to play the East-West cards? Six Diamonds is undoubtedly the best spot.

It makes if the trumps are 2-2 or the Queen is singleton and there is the extra chance that even if a defender has started with a guarded Queen of diamonds he may have to follow to three rounds of clubs.

First Challenger was set to work with the instructions that it was playing a weak no-trump (13-15 points) and that there was no opposition bidding. Its auction went:

West	East
1C	1D
1H	1S
3D	4NT
5H	6D
pass	

Not at all bad! The One Spade bid was 'fourth-suit forcing' in the best modern style and both halves of Challenger's split personality valued their hands well after that.

For a second run, East-West

were instructed to play a strong no-trump 16-18 points. It shouldn't have made any difference to the final contract, but.

West	East
1NT	4C
4S	5C
5S	7D
pass	

The Four Clubs bid — and indeed the Five Clubs bid — were Gerber and on finding South with two Aces and two Kings North plunged on to the grand slam. It is perfectly true that if South had held DQ as well

as his other high cards he would have bid exactly the same and Seven Diamonds would have been a doddle. As things stand, it is not an outrageous contract.

The next thing to try was a little intolerance bidding. Suppose that over One Club North overcalls with One Spade. Should this affect things? Apparently it did for now the bidding went:

South	West	North	East
1C	1S	2D	3NT
pass	2NT	pass	3NT
pass	pass	pass	

Let us be fair. The grand slam was not too wild, the small slam distinctly better, and nine tricks in no-trumps were simple. But the difference in valuation is intriguing.

What about the play of the cards? It was in this area that

Challenger Mark I had been at its weakest, failing to draw trumps or sometimes drawing them too enthusiastically.

It had never seemed to count tricks and refrained from taking finesses that were necessary. Perhaps over-zealous advertising had suggested that Challenger played the cards well. Both large stake money matches and legal action were threatened by its detractors and certainly the play had to be tightened up.

Even now there are problems. It is extremely difficult to lay down a set of axioms on how to plan the play of a hand — there are so many variable factors.

On the deal we have been considering Challenger had no trouble at all in its Three no-trump contract. After the lead of a top spade, it cashed its nine top winners — albeit in a slightly odd order, but efficiently enough.

In the Seven Diamond contract, Challenger won the spade lead and, playing to the percentages, correctly played off DK and DA. But the Queen did not fall and the slam was doomed.

But when Six Diamonds was the final contract, things weren't so good. After taking the spade lead and trying the top trumps unsuccessfully, the normal play is to try the clubs, hoping to get the losing spade away before the defender with the Queen of diamonds can trump.

Any tournament player would see this immediately and would waste no time in trying it out. Not so Challenger, who rather weakly conceded a trump trick and so went one down without even trying the Clubs.

Perhaps he wanted to get started on the post-mortem and criticise his partner's bidding!

Incidentally, the best line of play doesn't work, but a finesse of DJ the second round of the suit would have done. Whatever Challenger's faults, he doesn't peep!

INNOVATIVE TRS 80-GENIE SOFTWARE

from the professionals

Defend!

First there was Invaders, then came Asteroids, and now DEFEND!!!

Carrying on in the same tradition, Defend is a fast arcade type action game, complete with sound effects. Enemy spaceships come at you fast and furiously. If you succeed in shooting them down before they get your ships, you must still get yourself through a meteor shower (but at least they don't shoot at you) and finally, if you emerge unscathed, you must navigate a tunnel in order to get yourself completely out of danger. An enthralling game with excellent graphics, personalisation of highest scores and points bonuses. One of its best features is the "crisp" and immediate control the player has over the manoeuvrability of his ship which includes diagonal movement. Machine language, of course, for speed. A matter of taste, but we think it beats Invaders and Asteroids. Suitable for TRS-80 Models I and II and all Genie models.

Tape (16K) .

PRESTEL

Ever since Prestel started three years ago, games have been the single most popular thing on it. That's not what it was designed for, but games are a very good way of finding out about Prestel. There are now dozens of different games, ranging from short and simple ones to fairly complex ones.

Although Prestel runs on computers, there is a vital difference between it and even the smallest micro-computer. Prestel has no processing power. It cannot perform calculations, store variables or do clever things with the display — at least, not at the moment, but it's coming. What Prestel does have is simplicity, colour and routing. All games are therefore essentially games of choice.

The key point about Prestel is that it is a computerised information system that anyone can use. All you need is a numerical keypad, and with that you can control and drive the computer. You don't need to be an expert.

Colour is a very important element in Prestel — it gives it much greater impact than ordinary monochrome computer displays.

There are six colours, plus black and white. Three are the primary colours — red, blue and green. A colour T.V. screen is coated in thousands of phosphor dots which give out these colours.

If you mix the primaries, you get some surprising results — red and green together produce yellow. Blue and green become cyan — light blue — and red and blue is magenta. Mix all three primaries together to get white.

If that puzzles you, think what would happen if you could shine all the colours of the rainbow back through a prism. You would not get a muddy brown colour, but vivid white. It's the same on a T.V. screen.

Routing is the secret weapon in Prestel. Each page on a T.V. screen has an invisible "back" side to it, with various bits of information on it.

The most important thing — after the page number — is a list

By Peter Linton

of other page numbers — up to 10 of them. Suppose you are on page 12345, and number three on the routing list is 7654321.

If you press three, the Prestel computer is programmed to search that list for number three, and pick out that now page.

Then it searches for that particular page among the 200,000 stored on every Prestel computer, and sends it back down the phone line to your set. The amazing thing is that all that takes only a fraction of a second. And it can be repeated as many times as you like. It is as if you had a filing cabinet from which you could extract a sheet of paper in an instant — and that sheet could call up further sheets just as fast.

This facility presents great opportunities and challenges for Prestel designers. Effectively it means that you must think in ten-dimensional terms.

Any page can lead to any of ten other pages, which in turn can lead to ten further pages, and so on, for ever. It is almost impossible to put that down on paper, which is only two-dimensional, and things like flowcharts are usually little help.

A Prestel designer therefore has to visualise a logical path

through a maze of information — and allow for all the alternatives.

It can get pretty mind-boggling at times, but it does provide a useful mechanism for games. It means you can provide a range of simple choices. All the player then has to do is to key the number of his choice, and this calls up the result: — with a new set of choices.

A good example is a game called Superbike on 4782111 (pictured above). You are racing ex-world champion bike racer Barry Sheene, and you have to make a constant series of choices, whether to overtake him on the inside or outside.

This routing structure is the basic mechanism of almost every Prestel game, and a look through the games index shows the ingenuity that's gone into devising variations.

By providing a steady series of choices, it can provide a large combination of different possibilities. The catch is that if you play the game again, you get the same choices. There is no randomising element.

Another catch with designing a Prestel game is that you need to provide for every conceivable possibility, otherwise some players are going to get stuck. That can involve large numbers of Prestel pages for games where there are many choices. Think, for instance, how many different variations there can be in Noughts and Crosses. On Prestel that requires several hundred pages!

Prestel games are not as "intelligent" as most micro-computer games. But there are dozens to try, and new ones being devised all the time. Now that you know how they work, you'll enjoy them even more!

ARECADE

KEEPING WARFARE IN PERSPECTIVE

TIPS ON BATTLE ZONE

Patience is not usually demanded of arcade players, who are happier feverishly pushing buttons to destroy as much as possible before the next missile with their name written on it, homes in.

Battle Zone is a unique game, where the player is encouraged to manoeuvre until the right opening to hit back comes along.

The game simulates tank warfare giving a view from inside the tank. Tank controls are also faithfully duplicated with two levers which can be pushed into forward or reverse position simulating the two tracks of the tank.

Beginners quickly learn that pushing both levers forward sends the tank off in that direction, while pulling them back sends the machine into reverse. With one at full reverse and one at full forward the tank turns quickly on the spot.

But even with a good shooting eye, this knowledge is not enough to help a player survive for long. As turrets swivel in your direction, the best tactic is to go off diagonally to escape.

This is achieved by pushing one lever half forward and the other only halfway forward. The enemy's shells will fall just behind you. When you have gone right past the tank, check the radar to see the enemy's position behind you. Then reverse hard until it appears on the screen quite close up and turn on the spot. You will have two chances to get in a shot before the tank is in a position to fire at you again.

If you miss with both, then repeat the tactics. One danger is that you may run into the enemy as you reverse and then you will be helpless but the radar check should prevent this.

After 30,000 has been scored, the super tanks are unleashed, these turn much faster but the same tactics work, although you will only have time for one shot.

Among the other inhabitants of this machine is a flying saucer which flies swiftly along the back

of the plain. These are well worth hitting if they pass in front of you (5,000 points) but it can be lethal to chase them, even though they don't fire back, as a tank may use this opportunity to creep up on you.

With the missiles, which fly towards you from the back of the screen, it is possible to increase your chance of hitting them by going into full reverse and waiting until they get up really close.

It is also possible to put an obstacle between you and the missile which will cause it to miss but it will come back to try again — be ready for it.

A good player uses the radar to place tanks as half of them will materialise behind you. Scoring 150,000 will give the player a 15/20 minute game but beginners should watch for games which offer extra tanks for your money, to learn on. Our thanks go to Simon Eys of Waterlooville, in Herts, for the tips.

THE RECORD BREAKERS

Breaking new ground on arcade machines is turning into an endurance test as much as it is a test of skill.

This is proved by the fact that four students from Kent University are planning to spend eight days at the controls of an asteroids machine to put their names in the record books.

David Bickett, David Hill, Tony Thomas and Alan Tilling are the four whose endurance will be tested in shifts on the university's machine in Canterbury. As this issue goes to press the university's rag week will be taking place around the four of them as they attempt to set a new unbeaten score of 100 million.

If their attempt succeeds it will leave the present world record for dead Atan, which manufactures the Asteroids machines, monitors the world

record and it presently stands at 30,100,000 knocked up in 50 hours by a New Yorker.

David Bickett claims all four Kent players have previously been over the million mark. I have scored five million in a double game which lasted eight hours and we were left with 113 bases.

"We will have no shortage of people willing to invigilate the attempt as we are being sponsored for the rag week charity and any money we make will be going to spine bidders sufferers."

Are you record-breaking material? From our next issue we will publish some of the best scores we have heard of on popular arcade machines to give top scorers something to aim at. If you can beat our highest scores and are willing to prove it, please write and let us know.

THE ART OF ROCK BASHING

After Asteroids came Asteroids De Luxe and now Space Duel continues Atari's efforts to turn rock-bashing into a fine art.

Space Duel's asteroids are far from featureless chunks of space debris though. They come in a multitude of different colours and whirl through space, breaking up

SPACE DUEL

under fire into smaller segments of themselves. Alien spacecraft still frequent the pathways between them and your craft is still equipped with shields to protect itself from rogue meteors.

But the most interesting feature of Space duel is that two people can play at once. It is possible for both to take to the screen as enemies and go individually for a high score, or play as a team to knock out as many asteroids screens as possible between the two of you.

A further break with tradition is that the two spacecrafts can team up to give real fire-power. A chain is tied between the two

and they move around the screen in tandem, firing independently, but moving as one.

This takes some getting used to and teamwork is very important when moving out of the way of an oncoming asteroid. One craft can pull the other out of harm's way, but if both try to go in different directions at once, the meteors will come out on top.

The advantage is the increased fire power which can blast an asteroid out of harm's way very quickly.

When both craft are on the screen at once, a good player can help a beginner to pull through as the game continues until both have lost the required number of lives.

HERO WITH A YELLOW STREAK

AMIDAR

The Amidar may look like cuddly toys but their touch is deadly.

The game which is named after these creatures combines the fashionable arcade themes of maze chase and space capture.

In Amidar you take the part of a gorilla, who swings around the screen on blue bars which are covered in white fruits. As he moves along the bars he clears them of white fruits. If all four sides of a square are cleared the centre is filled in red and gradually the screen becomes a patchwork of red rectangles.

There are seven Amidars on the screen. One runs around the outside four corners and the other six move up and down always turning the nearest corner. These creatures are not as intelligent as the Puckman "ghosts" when it comes to hunting down their prey.

All the dots must be erased to clear the screen and start on the second area of the game. This time a framework of red lines comes up on the screen and the player is transformed into a paint roller. The Amidars, which resemble toy cats still undertake their regular patrols of the screen.

The aim on this screen is to use your paintbrush to pick up a yellow streak at the bottom of the screen and extend it. With the Amidars making life as hard as possible you first have to run the yellow around the border of the nearest rectangle, filling it in with a bright green and pocketing the bonus score which the space previously featured.

From this start it is possible to fill in the entire screen, with the really big bonus scores waiting for you at the top.

It is important to keep a cool head as the Amidar are quite capable of turning away from you even when they seem to have you surrounded. Just keep a check on where the next corner comes up and be sure that they will turn down it.

EXPLORE THIS OH-SO LENGTHY TOMB

TUTANKHAMUN

The treasure of the Pharaoh's tomb is awesome — but so are the creatures that guard it!

The Earl of Carnarthen's expedition into the mysterious depths of King Tut's famous pyramid proved hazardous — but arcade players have to face even more terrors.

The explorer who braves this video pyramid resembles a cartoon prospector character complete with a bushy white moustache and with tools strapped to his back.

This treasure hunter is also armed, which is just as well because he will have to face a horde of guardian creatures in this tomb.

This motley crew of monsters include a mummy and a cobra as well as some less explicable dungeon denizens. Their touch is deadly.

The labyrinth which leads to the treasure is long and tortuous.

LADYBIRD KNOCKS OFF THE SPOTS

LADYBUG

Any gardener will tell you that ladybirds are a force for good on the rosebushes.

They are now also undertaking heroic feats in the arcade in a new maze game.

The player takes the part of the ladybug, which also gives its name to the machine, and sets off on a spot consuming trip around the maze.

In this game the spots are few and far between and the pursuers are in the form of large blue beetles which try to corner your rampaging insect.

But you do have one big advantage over your adversaries, your ladybug can walk through the maze walls, as these are hinged doors which the creature can push open.

As one way opens another is inevitably closed as the door swings around in 90° to seal a different passage. The blue beetles cannot pass through the doors.

The good player will plan to block off the beetles completely surrounding them within four doors and leaving them helpless.

These blue beetles appear rather slow and cumbersome and even a beginner has a chance of doing well against them. But these are later replaced by some faster pink beetles who track down the ladybirds much more swiftly.

An interesting game for the beginner but the controls for the ladybird are not designed for fluid movement which can result in frustration when they do not respond quickly enough.

The monsters hunt in a pack some trying to get in behind you and others trying to draw your fire before leaping into some hell forgotten recess.

Your explorer has a limited amount of ammunition in his weapon which occasionally needs replenishing. But his main deficiency is that he can only fire horizontally and is in real danger if he ever gets trapped in a verbal part of the maze.

To help him avoid this happening the top of the game screen offers a "rader" display of the whole maze. On this the monsters can be seen as white blobs, converging on you from the far end of the maze.

Although it doesn't help you much in dodging the advancing horrors, it does prepare you for their charge so you can ensure a long horizontal passage stands between you and them.

You have three lives to try and make it to the treasure but they are not nearly enough — especially since, you are returned to the beginning of the tomb each time the monsters catch you.

The biggest danger among the first batch of creatures is the sarcophagus-like being which is invulnerable to your fire — or so he seems at first. In fact a sequence of three hits will make him turn away and rethink his avenue of attack.

The Sinclair ZX81 has a real poker face — it gives nothing away about its hand. No heads of sweat will form on its keyboard if it's bluffing on a jack high and you won't notice its RAM-pack trembling with excitement if it holds a full house. In draw poker, claim the best players, the early part of the game is all mathematical odds and the final betting is all down to psychology. This program will hardly give the ZX81 a believable personality but it will help the uninitiated learn how to play poker hands and how much to gamble on them. The ZX81 deals out two poker hands, one to itself and one to its opponent, you. After a quick look at the pos-

sibilities of your hand, you must key-in how much money you are willing to gamble on drawing the right cards against the ZX81's hand. The ZX81 will always cover your bet and often give you odds if it thinks you have made a rash decision. Then after you have changed your hand in search of that elusive full-house, the ZX81 does the same and it's winner takes all. Not quite Cincinnati Kid stuff but it will give a good understanding of the game and show why experienced gamblers never draw to an inside straight. After all everybody should know how to play poker, if only to help them understand why the west was as wild as it was.

STAR FIGHTER

MESSAGE TO STARFIGHTER:

Your mission is to destroy enemy craft and bases in this sector.

Our intelligence service has been unable to obtain exact locations of these targets but your shipboard computer will aid you in the search. Your ship is armed with neutron missiles and phaser weapons. Beware of asteroid storms in your sector. GOOD LUCK.

OK space fans — the object of this game is to search and destroy targets positioned randomly around the galaxy — which in this case is represented on the screen of a 40 column PET.

The game uses the whole screen for the galaxy, which is poked into position. This allows moves and action to be displayed as and when they happen. A second screen displays the co-ordinates of targets, starfighter and starbase, plus the condition of shields, energy, weapons and the number of targets available. The starfighter which you pilot can stock up with weapons and refuel at a friendly starbase.

All major parts and sub-routines of the program are prefixed by REM statements describing their function. Other significant parts of the program are:

Line 119 — number of targets per sector, Line 125 — frequency of starbases. Line 142 — frequency of asteroid storms, Line 150 — hostility of the targets, this increases as the number of targets decrease. Line 158 — frequency with which the targets move and attack. Line 620 — frequency with which new targets enter the current sector during combat. Lines 893-910 — prevent the program crashing by loading the commands into a file.

SEX AND YOUR COMPUTER???

THE NAUGHTY ONE

An adventure for fairly broad-minded people.
Pay your way through gambling dens, bars and
houses of ill-repute. You can be seduced or seduce. You can
steal, acquire, play at your opponent's losses.
Lose your money and borrow. (The store is
no bank, only a pawnshop, where your
collateral will be some of your clothes).
Gamble for the clothes of your opponents.
Force the newsmen to admit some clothes
(preferably from other players). (You gain
some sexy looks or else some sex).
Build a message pattern and hardware
for whatever your opponent. If they are
unlucky.

A mini version of this game is now
available on cassette. The mini version
on disk is much more expanded and
contains in between other things
40 pulse and bars, 20 gambling houses,
and also for any version of
Play it sells like hotcakes or play it
hard. It you dare that is.

A SPHINX COMPUTER GAME

THE SIGN OF HADRIN

Become familiar with dark sign Hadrin and dig your way to
a £1,000 treasure which is actually buried in the country.
A game which will test the highest intelligence and needs
real application to find the solution.
It also includes a list of outside activities.
Follow the trail of the dark sign Hadrin and
discover his tomb with the real treasure in it.

A SPHINX COMPUTER GAME

GOLD

Find your way to more than forty rooms, collect the
treasures and try to get out with them.
Very addictive. With the game come instructions on
how to win a Memory-Memory Expansion
On the same tape. Pick a Word, a game of skill
Try and beat your children at it.

A HILDERBAY GAME

THE MAZE GAME

Go through those dreadful mazes which are
unmapped and find your way out.
The game cannot be done living because the
mazes change at the time.

A SPHINX COMPUTER GAME

GOLF

A computer to the real thing.
Played on actually existing courses with a full selection
of clubs. Contains all the necessary like weather, wind
and other atmospheric circumstances. You control
yourself whether you slice or hook and you also
determine yourself the impact on the ball.

Available in March with full colour graphics.

A SPHINX COMPUTER GAME

THE SECRET CODES

Not a home-made type of game at all.
There are many coded balls on the file for cassette
which may be very difficult to decipher.

We undertake to pay £100.00 to the sender of the
first complete listing of all the balls, listing which must
be feasible of course.

KRIEGSPIEL

Wargamers have long realised that computers would add a lot to their hobby.

When the ranks of carefully painted warriors have been moved into their starting positions, the game proper gets underway only through some persistent dice throwing and careful consideration of tables.

The microcomputer can make short work of those leaving the general free to concentrate on his tactics. And although the game is certainly not as picturesque, it does mean that wargamers without the necessary patience to spend time building up and decorating their armies.

Ron Potkin's Kriegspiel is based on a Second World War tank battle and has become an extremely popular game on the Tandy. We'll leave it to Ron to tell you a bit more about the game.

BY RON POTKIN

RUNS ON A TANDY TRS-80 IN 16K

Each must be oriented left or right so squares and oblongs are out.

Keyboard characters are unrealistic. When playing one should be totally involved and feel as though the battle is really happening. I am faced the letter "A" for army does not turn me on.

Before getting involved in the detailed programming, you should understand the overall operation of the program. There are four arrays which control all movement and attack, these are:

Video screen: Run the program and put the hex board on the screen. Each hex is numbered according to its first "print 0"

About three years ago I bought several boxes of those small one-inch high plastic soldiers. They represented the French and British from the Battle of Waterloo. In all there must have been 400-500 pieces. The next three months were spent painting the detail on each piece using a magnifying glass, but after the first 100 I regret that my enthusiasm began to wane. There is no doubt that the sight of several hundred warriors lined up for battle is very appealing but I felt there had to be an easier way.

All this occurred about 12 months before the "Birth of the Byte." I had played several commercial wargames and although they were very interesting, there was a lack of realism because I felt that a General should be allowed to concentrate on the

battle and not be tied down to rolling dice and consulting charts. The TRS-80 has changed all that. Think of the advantages.

It determines when conflict should occur and the nature of the conflict.

It rolls the dice and resolves all combat between opposing sides.

It is an impartial referee and it will not tolerate heavy breathing or that gasp of relief that moves a complete armour division across the Mediterranean.

Real hidden movements are possible. No longer does one need to write down on a piece of paper the current location of each hidden piece.

It was with these points in mind that I wrote Kriegspiel. While designing the game I had to consider:

The minimum size of hex
The shape of each piece
The necessity to be able to distinguish pieces on each side.

I finally determined that four bytes were required to build up a neat shape and meet all my requirements. After allowing for a line of messages and spaces between the pieces I had a board of about 120 hex. In Kriegspiel II, I have adopted a different approach so that it is possible to have 500 hex.

I think you will enjoy the game. My son Leigh, and I have played it many times and have developed our own personal strategies. Invariably, one scenario becomes particularly interesting and we play it over and over.

Kriegspiel II is a further development of this game with more pieces, minefields, weather, recruiting, a larger board and other features, but the same basic strategies apply.

I am not going to give any advice on tactics other than to urge you to study the table of odds very carefully before you attack.

position. The top-left-hand hex is number 4. The next is number 12 and so on up to 60 in steps of 8.

The second line runs from 64 to 120. Note that alternate rows are offset by four so that the hexes fit together. The same format continues down to hex number 956 leaving the bottom line for messages. Let's look at a section of the screen using hex number 400 as an example. Now deduct 400 from every number to arrive at the offsets. If we know the direction these enable us to move a piece from one hex to another. We could calculate them but it is faster to use "on-direction-goto" (line 21600). As an alternative a table of values could be used.

Piece table "PC" This is 32 by 8 array and contains details of the 16 pieces on each side. The first column is the current hex number position on the screen. The second contains the type of piece-tank, infantry, engineer or capital. The other four columns contain combat pointers which will be described later. When a

piece is eliminated, column 1 is set to zero.

The board "BO" This is a 16 by 16 array, including the zero index and is an internal representation of the map. Each indexed position is equal to one hex on the screen. Each vacant position on the screen is set to zero on the board. An occupied position contains the index of that piece in the piece table. Positions occupied by mountains contain -1, -2, or -3 according to the type of mountain.

Characters "PCS" This is a 7 by 4 character string holding the shapes to be printed on the screen. The correct character is obtained by means of its index in the second column of the piece table.

It will be apparent that using the information in each of the arrays, we can easily move from one table to another. There is one missing link. This is the con-

2. Turns are determined by: 5 in line 1000 which sets the variable 1, to either 1 or 17 indicating the index of the first piece to be moved.

3. Gets the hex number FL, the number of moves "MV", and the character "FLS." (lines 1010, 1020).

4. Prompt for a decision by flickering "FLS" and "MV" (line 1030).

5. If the input is a number, check if valid and either move the piece or continue prompting (lines 1050-1210).

6. Checks during movement (line 1065) for the winning condition.

7. Line 1075 checks "river crossing." If this is true, an extra movement factor is deducted.

8. Line 1182 checks one hex in every direction using "Search," looking for an opponent.

9. Intermingled in the coding is the Hold routine. Follow this through watching the variables "HD," "K1," and "HL" in lines 1009, 1010, 1017/8, 1047/8, and 1210.

The "C," "S," and "F" commands are easier to follow, but note that "C" jumps immediately to line 1300, whereas "F" carries out a full check of pieces that have not been prompted to check for possible attacks. Since this involves checking six hexes for every piece, it is a slow process and therefore, if it can be seen that no pieces are adjacent, it is better to use "C."

Let us take stock of what we have when we finally reach line 1300 — the start of the attack sequence.

1. The board, video, and piece table have been updated in respect to all movement.

2. Mountains will have been adjusted on the board and video when they have been eaten away by the engineer.

3. Columns 3, 4, 5, and 6 of the piece table contain information regarding attacks. Note that if column 4 is set to one that attack will be automatic and requires no prompting. If it is greater than 1 then a decision is required by the player.

COMBAT SEQUENCE

Lines 1305 to 1500 are a prompting routine and settle all attacks. Note that the use of the flag "Z" is set to one if an attack is found. If it is zero at line 1550 it means there are no attacks and the combat sequence is finished.

Lines 1600 to 1745 are more complex. They are concerned with determining which pieces are involved in each individual combat whether the defender has support; whether the attack is across the river; and finally selecting a random result from the attack table.

A defender table "DR," is set up. This holds details of each defender as it is found in the piece table (line 1620). The attacker is put in the attacker's table "Q" (lines 1680-1690). We now go through the rest of the piece table searching for any other pieces attacking the same defender. These are added to the "D" table. As each is added, the attack factor "AT" is increased (and increased again if the attacker is a tank). The river crossing flag is "and" ED with "DR3" and column 3 of the piece table negated so that piece cannot be involved in another attack.

Lines 1700-1710 calculate the defender's factors and go to the subroutine at 4000/4200 to check for support.

Lines 1720-1740 calculate the attack ratio and find the appropriate column in the attack table from which it selects a random result. If you are like me, you probably find typing the rules is tedious, so if you want to see the attack table, look at lines 20162-20167. Now read through lines 40192-40415 which tell you the outcome for each value in the table.

Note the use of the flag "RV" which indicates whether the attack is across the river. The rules state that the defence factor is doubled unless the defender is also being attacked on the same side of the river. Put simply, this means that if the river flags of all attackers (column 6 of the piece table) are set, then the attack is across the river. If any flag is not set then all others are nullified and the defence is not doubled. This result is very easily obtained by using the "And" instruction and what at first appears extremely complex is resolved in a single instruction!

Lines 1750 to 2500 carry out the results of the combat result "R" as follows:

1. Exchange
 - The defender is automatically eliminated (line 24000), but a test must be made to check how many factors the attacker had (line 1706/7). If they were less or equal to the defender's, then elimination is automatic. Otherwise the attacker is prompted for the pieces to be eliminated.
2. Attacker Eliminated
 - This is automatic and all attackers are eliminated using the routine at line 26000.
3. Defender Eliminated
 - This is automatic and the defender is eliminated using the routine at line 24000.
4. Defender Retreats
 - The player is prompted for the direction of retreat and a check is made for legality. If there is no retreat then an "E" is typed and the piece is eliminated. The variable "RD" is a count of the number of hexes moved. Remember that the defender is now allowed to move next to an opponent.
5. Attacker Retreats
 - This is essentially the same as "Defender Retreats" except, of course, that all attackers must retreat. The program now returns to line 1600 to look for further combat. Exit back to the main routine via the return in line 1610.

The following is a list of the variables used in the program:

- "A" — direction indicator
- "AS" — input from keyboard
- "AD" — defender support factors
- "AF" — attack ratio
- "AJ" — piece in adjacent hex
- "AT" — attack factors
- "AX" — "AT" plus 50%
- "B" — temporary variable
- "BS" — temporary keyboard input
- "B1" — piece index in adjacent hex, used during initialisation
- "B2" —
- "BD" — internal board, used in calculating attack result
- "CL" —
- "CT" — temporary variable, defender's factors (including support)
- "DF" — defender pointers
- "DT" — defender's factors used in exchange to ensure that enough attackers are removed
- "E" —
- "EX" —
- "F" —
- "FL" —
- "FLS" —
- "HD" —
- "HL" —
- "K1" —
- "MV" —
- "P" —
- "PCS" —
- "RD" —
- "RV" —
- "S" —
- "T" —
- "Z" —

SILVERSOFT

personal computer software

16K/ZX 81 SOFTWARE

"STARTREK"

16K **STARTREK** Exciting space adventure game including Klingon, Starbases, phasers, 8x8 galaxy, etc

"SUPER-WUMPUS"

16K **SUPER-WUMPUS** Can you hunt and catch the mysterious wumpus in his underground labyrinth? Intriguing underground adventure

SPECIAL ANNOUNCEMENT FOR ATARI OWNERS COMPUTERSOFT PRESENTS NETWORK A NEW CONCEPT IN COMPUTER MAGAZINES

A MAGAZINE —

A USER GROUP — PROGRAMME EXCHANGE

NETWORK is a new idea in computer magazines, comprehensive, colour graphics programme for all Atari 400/800 users with 410 recorders. Featuring Computer C.B. New product information, 'The puzzler', Switch and Swap, details of discounts for subscription holders, Your letters and much more. Including a FREE, exciting graphics game sampler 'HOT-FOOT'. **NETWORK** is on a C30 cassette tape for ATARI 400/800 computers (16K minimum).

Also available for the ATARI® 400/800.

NEW!! K-RAZY SHOOT-OUT The latest CARTRIDGE received from the USA A MUST FOR ALL 400/800 OWNERS

Prices include VAT

K-RAZY SHOOT-OUT CARTRIDGE £29.95 An exciting fast action game. Eliminate the alien robots and escape IF YOU CAN!

GALACTIC CHASE 16K Cass £16.95 (as below)

GALACTIC CHASE 16K Disk £29.95 A fast moving

musical game with great sound and graphics

GHOST HUNTER 16K Cass £24.50 All action MAZE

GAME with two player option and Ghost hole function

A really compelling game

GIANT SLOTH 16K Cass £11.50 Ski down the slopes in

your own home. Great fun for all

CHARACTER GENERATOR 16K Cass £18.50 Design your

own characters and create games yourself with ease. A very

useful utility programme

TEXT WIZARD 32K Disk £99.50 A comprehensive word

processor, lets you ATARI to produce letters and reports

Easy to use, includes: Expanded print option, underlining

search and replace etc

VIC 20 SOFTWARE

QUALITY SOFTWARE FOR THE 3.5 VIC 20 COMPUTER

DEFLEX

Fast-moving action and spectacular colour and sound effects add to the excitement of this original game. Deflect the rapidly moving ball to hit stationary or moving targets. Records top ten high scores. 20 skill levels

ROX

At last an original and compulsive space game. Defend your moon base from the deadly ROX from space. Increasing levels of difficulty and superb visual and sound effects make this the greatest new arcade-type game since Space Invaders

DEFLEX and ROX on same cassette £4.95

TEN SUPERB 3.5 PROGRAMS - ALL TEN FOR £6.95

GEM+

Create and store your own custom character sets

TANX

Tank battle for 2 players.

MUSIC

Encode tunes in three-part harmony up to 130 notes long on 3.5k machine

SPACE ZAP

Destroy alien spacecraft attacking your space station

BREAKOUT

Superb sound and colour effects

HI-RES

Sketch on a 128 x 128 pad using keyboard or joystick

SPIRO

Create photograph-type patterns in hi res

VIC TRICKS

Program demonstrates the special uses of VIC chip registers

MASTERMIND

Uses colour and sound to the full.

WORD GAMES

Unusual and challenging game for 2 or more players

d'tronics

ATARI MAIL ORDER

GHOST HUNTER Add the message of Hallowe'en to the thrill of Ghosts. An exciting, fast action arcade-type game with excellent sound and graphics. **16K (C) £10.95**

CAVERNS OF MARX Fly your attacking spacecraft right into the bowels of an alien Martians base, blasting away at evil demons and Martians fighters as you head east and west from dodging clever rock ligands. The combination of sleek, heart-pounding action, graphics, and the fast-paced, convoluted battle action makes this one of the most exciting games on a computer. **16K (C) £10.95**

INTRUDER ALERT This is a fast-paced graphics game which places you in the middle of the "Invader" having just stolen its plans. The drods have been alerted and are directed to destroy you at all costs. You must find and enter your ship to escape with the plans. Five levels of difficulty are provided. **INTRUDER ALERT** requires a joystick and will run on 16K systems. **16K (C) £11.95**

FOREST FIRE Using excellent graphics and sound effects, this simulation puts you in the middle of a forest fire. Your job is to direct operations to put out the fire while compensating for changes in wind, weather and terrain. Not protecting valuable structures can result in startling penalties. Life-like variables are provided to make **FOREST FIRE** very successful and challenging. No two games have the same ending and there are 3 levels of difficulty. **24K (C) £15.95**

GALACTIC CHASE 10K cassette. A fast real-time graphics type game in played to include clarity the graphics and sound capability of the Atari computer. **£10.95**

MURDER AT AWESOME HALL Colonel Awesome and a few friends are gathered at the hall. Colonel Awesome has just been murdered. Using your incredible powers of deduction can you solve the case? You must find the weapon, the murderer and the room in which the crime was committed. Twenty rooms or two floors serve weapons and provide possible murderers. Excellent floor plan graphics. **16K (C) £12.95**

MEMORY MAP A list of all those useful memory locations you wish you knew how to access. **£4.95**

SANTA CRUZ/TRICKY TUTORIALS

DISPLAY LISTS Teaches you how to alter the screen format of small and large text on the screen together and high and low text graphics. **16K (C) £4.95**

HORIZONTAL/VERTICAL SCROLLING Enables graphics or text to be moved up, down or sideways. You could move only the text on the bottom half of the screen or create a map and scroll smoothly over it. **16K (C) £7.95**

PAGE FLIPPING Learn how to have a computer draw the next page you want to see while you're at the previous page then flip to it instantly. A very useful program. **16K (C) £9.95**

BASICS OF ANIMATION This program shows you how to animate on-line shapes (with sound) using **PLOT** commands and also has a nice **Play-Missile** graphics game you can play with. **16K (C) £9.95**

PLAYER-MISSILE GRAPHICS This program shows you how to create a simple shape called a player that takes you through over 20 scenarios to create a complete business application and 8 small games. **32K (C) £11.95**

SOUND Unless you have spent many hours experimenting with the four voice channels of the Atari, you will learn a lot from this book. With many examples of special sound effects. **16K (C) £4.95**

MINI WORD PROCESSOR Requires printer and 32K of memory. Suitable for simple editing of text, and storage of text up to 5 pages of length or after 40 or 50 lines. Great value. **32K (C) £9.95**

KIDS PROGRAM 1 Three programs on one tape. Maths, test your child's maths skills. **Onlines** to your computer. Lost Treasure, search over a small island looking for a treasure. **16K (C) £8.95**

BOOKS BUSINESS Programs on this tape include Amortisation Table, Monthly mortgage payment, Depreciation schedule, Savings and Loans Averaging, Scores Test and Yards, Paycheck Calculation, Interest on the weekend, Mortgage Comparison, Projects Expenses, Monthly Sex Graphics, Deconvolution Converter, US Metric Conversion, Checkbook Balancer. **32K (C) £4.95**

KIDS 2 Three more programs for your children. Spelling Bee, read and test those memory tests, remember all letters give a lot of fun. Touch follow the computer instructions and stop yourself learning. **16K (C) £8.95**

THE GRAPHICS MACHINE Type is simple commands like line, box, circle, polygon, fill and also screen to get home pictures you can save and retrieve in seconds. Several demos are included in this great program. **48K (C) £12.95**

PLAYER PIANO Turns your keyboard into a mini piano. Create your own songs save on cassette or disc, up to 400 notes in memory. **24K (C) £9.95**

Atari 400 from	£2.99
Atari 800 from	£5.99
Atari 410	£5.00
16K Ram from	£4.00

ENGINEER

Have you ever had the urge to build a bridge but just couldn't find the time or place to construct one? If so, then this simulation is for you.

The object of this game is to successfully build a bridge from the ground up. You have been hired by the San Francisco Public Works Commission to rebuild the famous Golden Gate which was recently destroyed by a powerful invasion from space. You must connect the two blocks at the top of the screen. You do so by placing beams from the bottom until you can support the connecting beams across the top.

There are only a few rules, as you are your own boss. You must have the right end of the beams supported by either another beam or the rocky cliffs on the side. The only other item to be aware of is the ever-present inspector, who will walk up and down during construction. All he asks of you is that you lay beams below his feet only — so you can't drop one on his head.

The game itself is simple to play and win, so the challenge is in completing the entire work in as few days as possible. To play, all you need is an 8K Atari with one joystick, which goes into the leftmost slot.

VARIABLES

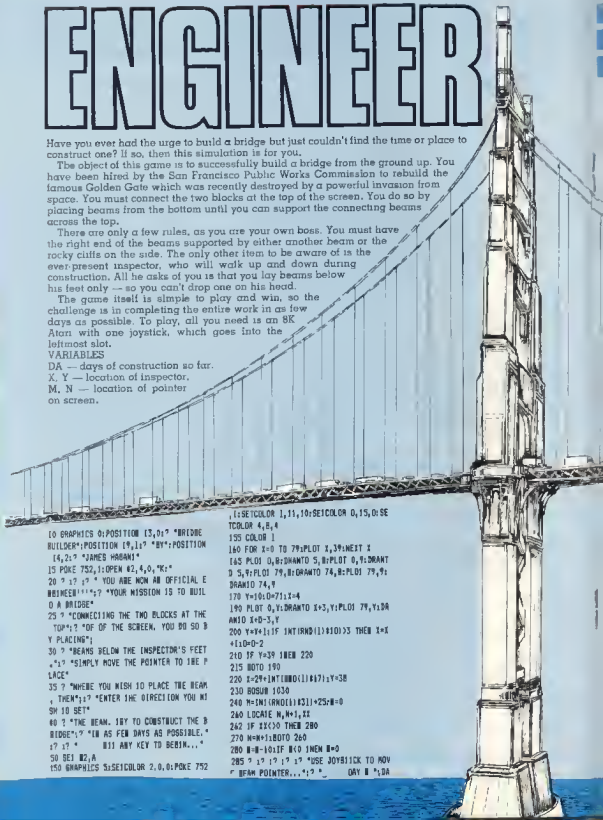

DA — days of construction so far.

X, Y — location of inspector.

M, N — location of pointer on screen.

LANDER

Z
O
O
Z

CONDITION RED! "Commander... the space shuttle's fuel tank is leaking. We have to make a forced landing on the lunar surface — and soon. The fuel is fast running out! What shall I tell the passengers? Commander..." You have the lives of the shuttle's passengers and crew in your hands as your craft plummets towards the moonscape, hundreds of barren lunar miles from safety — will you save them?

Unlike most lunar lander games Moon-Lander provides lateral thrust controls which accelerate the craft left and right rather than just moving it. Facilities are also provided for changing your fuel capacity, vertical thrust, lateral thrust, and the strength of gravity.

You have four instrument readings and a video display of your landing. The instruments consist of two speed indicators — one vertical and one horizontal — a fuel gauge, and last, but not least, an altimeter.

Using these instruments you must land, with a vertical velocity of 10 metres/second or less, on a reasonably flat piece of ground.

The program is written in Acorn Atom Basic for a machine with a fully expanded lower text space. For those with other machines who may want to convert the program to run on their systems the shortened form of the statements is usually the first one or two letters of the relevant statement followed by a dot. Variables preceded by a % symbol are, unlike the convention used by most other Basics, real variables, and those without the % are integer variables. All GOTOs and GOSUBs in the program use labels for speed — ie G. A. program control to the section beginning with the label 'A' — in the given program this would be line 1030.

Returning to the program itself line 30 calls the instruction printing subroutine which, having printed the instructions, waits for the shift key to be pressed before returning control to the main program.

Lines 40 to 140 then input fuel capacity, gravity, etc and check for illegal inputs. The following lines, up to line 320 set the screen to graphics mode and draw the moonscape — with two randomly positioned, random height peaks.

Line 340 prints out the instrumentation headings (P. \$30 homes the cursor). Lines 350 and 360 turn the moonscape grey, and lines 370 and 400 place 80 stars (white pixels) in random formation on the screen. The next two lines perform all the necessary initialisation (height, fuel, etc), and then, at line 430 the main program loop starts. Lines 440 to 470 mirror the effect of gravity and input the controls — the instrument readings are then updated by lines 480 to 550. Control is then transferred to the routine with label 'A' which starts at line 1090. This routine works out the new position of the lander and reports it accordingly.

The next three lines in the main loop (570 to 590) check to see if the craft has landed or gone off-screen and, depending on the results of these tests, either loop back to line 430 or continue to line 600.

Lines 600 to 700 then determine whether or not the ground on which you touched down was acceptably flat. Lines 710 to 1060 output the evaluation of your piloting abilities.

HOW TO GET SERIOUS ABOUT ZX GRAPHICS FOR ONLY £3.50

Also available over the counter at
Derry's Bookellers, 2 Cornhill St., London EC1
Butler Micro Shop 374a Strand High Rd. London SW16.

Fed up with listings that ignore the graphic approach?

Is your PRINTING and PLOTTING still guesswork?
Do you want to write data programs with graphic PRINT AT
and PLOT and professional looking 'windows' and 'scrolls'?
Or maybe you're still trying to find the successor to Space
Invaders! All you need is ingenuity and the **PRINT'N PLOTTER JOTTER**.

It's the professionally-produced ZX Graphics—
and designed by enthusiasts for enthusiasts.
Just take a look at the specification—then think
of the possibilities for **real** graphic graphics!

PRINT'N PLOTTER FILM TOO — FOR ONLY £2.25!

Jotter 'FILM' is a matt Polyester film version of the 'JOTTER' Grids
identical in size so you can co-ordinate **precisely** PRINT and PLOT
or you can copy photographs, drawings, maps, charts! The surface
of the film is ideal for drawing (with pencil) and erasure.
With both JOTTER and FILM the graphics possibilities are enormous—
despite low resolution. Isn't it time you got serious about ZX Graphics?

Post to Butler, Currie & Hook, 19 Borough High Street, London SE1 9SE.

Please send me 'Jotters' @ £3.50 (inc. VAT, P&P)

Please send me 'Films' @ £2.25 (inc. VAT, P&P)

Please send me your illustrated leaflet—I enclose a stamp

Please bill my Access/Bankcard No.

ZX-81 16K SOFTWARE

PACK 16/1 includes all of:

AIR TRAFFIC CONTROL: Animated radar screen of busy airport shown, you must bring planes into land, INVADERS- INVADERS SELF PLAY: PHONEBOOK, keep friends and relatives numbers on cassette, OATE '81 computer dating program, who will it pick for you?

ALL ONLY £4.95

PACK 16/2 includes all of:

ADVENTURE ATLANTIC: You may become very rich or you may be marooned forever, BREAKOUT: SQUASH PRACTICE: TRANSLATOR: translates any European language to any other, vocab on cassette, COMPUTAPRINT: use this program to predict horse races, or football pools!

ALL ONLY £4.95

Both packs come with full instructions, booklets and are saved on cassette ready to run.

TAPEBOOK 50 version 3

50 PROGRAMS for the IKRAM ZX-81.

The latest version includes: SQUASH, INVADERS, COLUMBIA, SPLAT, INTEGRATION, BANK A/C, CREDIT CARD CALCULATOR AND LOTS MORE.

All on cassette and ready to run now. With full instructions

Still amazing value at £6.96 the lot.

ZX AUTOCODER — Converts Basic to Machine Code Automatically

You enter your Basic program and Autocoder prints out the equivalent Z80 assembly language program — £6.95

The breakthrough you've waited for: PROGRAM THE ZX-81 IN ENGLISH!!

with GAMAL 81, you can now write adventure programs in hours not weeks and with GAMAL B1 you'll have every adventure you'll ever want for the price of one. Comes on cassette with instruction book, £12.95.
(requires 16K) (£8.00 see below)

Deep beneath the waves lurks a horribly beweaponed submarine waiting for its prey — a convoy of cargo ships protected by launches, fast patrol boats and aircraft carriers.

The aim is score the highest number of points in one minute. You have an unlimited supply of missiles which are fired by pressing 0. If 0 is pressed again before the first missile has reached its target it will self-destruct and a second will fire from the sub.

Bonus points are awarded for accuracy. The closer to the centre of the ship your missile lands the more points you score. I and P are used to move the sub left and right.

The highest score for this program so far is 1100. Can you beat it?

Notes on the program: S\$=submarine; T\$=cargo ship, E=2; C\$=carrier, E=1; L\$=launch, E=3; SP\$=speedboat, E=4.

B: random number -1 or 1, which decides which direction T\$ AND C\$ move. C: height of the missile. It is used to stop the missile going over the scenery. D: random number, 1, 2 or 3, which decides the height of the ships up the screen and volume of sounds. E: changes for each ship and is used for scoring and printing of the sinking ships. G: random number 1-10, which provides probability of ship appearing. I: gives the horizontal position of the missiles. J: used as a delay to create radar sound.

ACK

RUNS ON A VIC 20 IN 3.5K

BY STUART HALL

Lady Luck presides over the popular dice game of Yahtzee, but you make the calls, and the computer makes a worthy opponent.

For those not familiar with Yahtzee, it involves five dice but a good deal of skill and judgement as well as a fair slice of luck.

There is a poker-type scoreboard for each player with a list of things to be achieved and scored. The player throws the five dice and decides which section of the scoresheet that throw is dedicated to.

The scoresheet is made up of ones, twos, threes, fours, fives, sixes, high run (2, 3, 4, 5, 6) and low run, four of a kind, three of a kind, two pair, a full house, or pair, a Yahtzee and a chance. Bonuses are scored for making a Yahtzee (five of a kind) and scoring well on the first section: ones-sixes.

Say the player throws 2, 2, 2, 6, 5. He then has the choice of trying for a three of a kind, three on the lefthand side of the scoreboard or keeping the three twos and rerolling the other two dice to achieve a four of a kind or a Yahtzee. Three throws is the limit before he fills in his scorecard.

If he is not successful in his two further throws he can still go in the first two options. If however, he fails to score any of the combinations, he scores 0 in one of the boxes.

The game involves a fair amount of strategy and the computer plays a fair game. But there is plenty of scope for improvement and all that is needed is to add to the data statements in lines 30000 through to 30140, or try adding further options to lines 7310: 7365: 7305: 7414.

Yahtzee is written for the Video Genie but it will work on a TRS-80 and, as there are no PEEK or POKE statements, the reader should have little difficulty in adapting the graphic part to other machines.

Array: x(15) is used to swap data when turns are transferred from computer to human or vice versa.

H(15) Stores human scorecard.
CP(15) Stores a computer scorecard.

t(5) is for storing throw of dice.
x(3) is used for storing 3 new throws by computer.

**WE ARE NOW STOCKING THE
 APPLE II AT REDUCED PRICES**

**AUTOSTART
 EURO PLUS**

**4RK
 £649
 VAI**

Growing learned APPLE II is faster, smaller and more powerful than its predecessors. And it's more fun to use too because it's built in features like:

- BASIC: The Language that Makes Programming Fun
- High Resolution Graphics in a 50,000 Point Array for Penny Defined Displays
- Sound: Capability that Brings Programs to Life
- Hard Controls for Games and Other Human Input Applications
- Internal Memory Capacity of 4KB Bytes of RAM, 128 Bytes of ROM for Big Screen Performance in a Small Package
- Eight Accessory Expansion Slots to let the System Grow With Needs

You don't need to be an expert to use an APPLE II. It is a complete, ready to run computer. Just connect it to a video display and start using programs for writing your word the first day. You'll find that an indispensable help you make it your own personal problem solver.

**APPLE II SC II
 3.3 Oos**

**Disc with Controller
 £339 VAI**
**Additional Drives
 £289 VAI**

- Powerful Dual Operating Software Supports up to 8 drives
- Name Access to Files for Easy Use
- BASIC Program Chaining to Link Software Together
- Random or Sequential File Access to Simplify Programming
- Dynamic Disk Space Allocation for Efficient Use
- Individual File Write Protection
- Extensive Accidental File Alterations
- Loads in 8K Byte Binary image in 8.5 sec
- 11.2 sec in Parallel
- 1000 Bytes per Second
- 110 Kbytes/110K Bytes per Second on Standard 5 1/4 Diskettes
- Powered Directly from the APPLE II to 5 Drives for Convenience and High Reliability
- Packaged in Heavy Duty Colour Coordinated Steel Cabinet
- Colour Monitors for Apple £276 VAI

**LUXOR 14" COLOUR
 MONITOR FOR THE
 APPLE** £295 VAI

THE EPSON MX SERIES

MX80T £339 VAI

Standard Features

- Proven and Spacing
- Right Margin Justification
- 3 way paper handling
- Upper and lower case
- True Descenders
- 80/132 Column
- Underlining capability
- Condensed/Expanded Print
- Sub Scripts and Super Scripts
- Pin and Friction Feed
- 80/132 Column

738 as above with special feature of Dot Resolution Graphics.

NEC SPINWRITER

only £1480 VAI

NEC a high quality printer with a point to point, humble, but has less diameter and more than a day wheel giving a quieter faster, more reliable printer that can cope with gloating and printing 1108 ASCII characters with up to five copies. In copy or tractor feed. The ribbon and thermal can be changed in seconds. 36 characters per second subterminal printing with red track, full software subterminal proportional spacing, tabbing and much much more.

HITACHI PROFESSIONAL MONITORS

9" — £129.99 £95.95 VAI
12" — £199.99 £149 VAI

- Reliability Solid state circuitry using an IC and silicon transistors achieves high reliability
- 100 lines horizontal resolution
- Horizontal resolution in excess of 100 lines achieved in picture colour
- Stable picture Even played back pictures of VTR can be displayed without flicker
- Longing video input Video input can be locked through with built in varicompensator
- External auto operation
- Available as option for U and C types
- Compact construction 1 unit monitors are mountable side by side in a standard 19 inch rack

**ACORN ATOM

**INTRODUCING
 THE NEW GENIE**

Over 100,000 business schools, colleges, homes, etc. Suitable for the experienced hobbyist teacher.

GENIE I

STILL ONLY £279 VAI

NOW INCLUDED: Sound, Upper and lower case, Extended BASIC and Machine Code, installing the Wiring and Execution of Machine Codes, Programming direct from Keyboard

16K RAM 12K Microchip BASIC

Genie Software Range:

- Self Contained PSU Unit
- Monitor
- Genie External Cassette Interface
- Genie High resolution TV or Mixer
- Compendium and Ready to Go Display
- Genie 32 or 64 Characters Switching
- 3 Manuals
- Extensive Manual
- Beginner Programming and BASIC Reference Manual
- BASIC Program List
- Point Graphics

GENIE II

£299 VAI

The NEW GENIE II an improved Machine 13K Microchip BASIC in ROM 71 keyboard, numeric keypad, cassette interface, 16K RAM, Extended to 64K

**GENIE I & II EXPANSION UNIT
 WITH 32K RAM** £199 VAI

PARALLEL PRINTER INTERFACE CARD £39.95 VAI

TEAC DISK DRIVES

- TEAC FD 50A has 40 tracks giving 125K Bytes unforgotten single density capacity
- The FD 50A can be used in double density recording mode
- The FD 50A a Shugart SA400 interface compatible
- Directly compatible with handy TRS80 in parallel interface
- Also interfaces with Video Game S4/PT 1980
- North Star Horizon Superstar Naicom etc. etc
- Address selection for Game channel up to 8 bits
- Disk plus power supply housed in an attractive grey case

48 TRACK Single Disk Drive	£225 VAI	Double Disk Drive	£389 VAI
72 TRACK Single Disk Drive	£299 VAI	Double Disk Drive	£499 VAI

SALE MEMORY UPGRADES

16K (8 x 4116) £12.90 VAI
4K Komputek (8 x 2114) £12.90 VAI

WE HAVE ONE OF THE LARGEST COLLECTIONS OF COMPUTER BOOKS UNDER ONE ROOF, ALONG WITH SOFTWARE FOR THE GENIE, TRS80 AND APPLE.

NOW IN STOCK

THE NEW & EXCITING TRS80 MODEL III

48K £599 + VAT

The Radio Shack TRS80 Model III is a ROM based computer system consisting of:

- A 12 inch screen to display results and other information
- A 80 keyboard (includes an expanding program interface to the computer)
- A 2.80 Megaprocessor (the brains of the system)
- A Real Time Clock
- Real Only Memory (ROM) containing the Model III BASIC program and data
- While the Computer is on (powered on) a separate item "16K to 48K" optional internal
- A Cassette Interface for long term storage of programs and data
- Includes a portable cassette recorder (optional extra)
- A Realtime interface for hard copy output of programs and data
- Includes a separate line printer (optional extra)
- Expansion slots for upgrading to an RS 232 C serial communications interface (optional extra)
- All these components are contained in a single modified case and all are powered via one power cord.

A red die with white pips showing the number 5. The die is tilted, showing the top, front-left, and front-right faces. The top face has five pips arranged in a quincunx pattern. The front-left face has three pips, and the front-right face has two pips.

MANIPULATING YOUR DATA

An important part of designing a program is deciding exactly how data is to be represented and organised.

The same data may be represented and organised in many different ways, and a particular form will allow some operations to be performed more easily than others.

For example, arithmetic of any kind is very difficult with Roman numerals, but much easier with modern positional notation, and in positional notation the choice of base makes a difference to some operations.

The simplest and best known example is the way in which we can multiply or divide by 10 in base 10 by shifting the digits left or right relative to the decimal point, while in base 2 the same operations give a multiplication or division by 2.

A less familiar example is found in tests for divisibility. Some commonly used tests are that a number is divisible by 2 if its last digit is divisible by 2, divisible by 3 if the sum of its digits is divisible by 3, and divisible by 9 if the sum of its digits is divisible by 9. However, these tests rely on the number being written in base 10 and will not necessarily work if the number is written in any other base; for example 9 in base 3 is 100 and none of the tests works in this case.

Character sets in computers vary in the number of characters available, the graphics characters included, and the internal code used to represent the characters.

For many purposes it is not necessary for the programmer to know the internal code since high-level programming languages usually provide functions for converting from code to character and vice versa.

In Basic the commonly used

functions are ASC ("x") or CODE ("x") which gives the code for the character x, and CHR\$(N) which gives the character corresponding to the code number N.

In some machines the same code gives different results according to how it is used; for example, on the PET PRINT CHR\$(N) and POKE S, N where S is a location on the screen, do not generally produce the same character.

In programming it is always best to use methods that do not depend on special features of the machine, as this will make your programs easily transportable.

The following program for converting numbers to hexadecimal (base 16) demonstrates a method that is often used for calculating the character code corresponding to the digits of a hexadecimal number.

```
100 PRINT "DECIMAL NUMBER";
110 INPUT N
200 LET N1 = N
210 LET H$ = ""
220 LET Q = INT (N1/16)
230 LET D = N1 - 16*Q
240 LET A = D + 48
250 IF A > 57 THEN LET A = A + 7
260 LET H$ = CHR$ (A) + H$
270 IF N1 < 16 THEN GOTO 300
280 LET N1 = Q
290 GOTO 220
300 PRINT N: "IN DECIMAL IS";
H$, "IN HEX"
310 GOTO 100
```

Lines 220 and 230 give D equal to the remainder after dividing N1 by 16; which is the value of the rightmost digit in the hexadecimal form. Lines 240 and 250 give A equal to the ASCII code for D.

In the ASCII code the digits 0 to 9 are coded as the numbers 48 to 57, and the letters A to Z are coded as 65 to 90, thus adding 48 to D gives the correct ASCII code if $0 \leq D < 9$, but if $10 \leq D \leq 15$ it is necessary to add another 7 to get the ASCII code for a letter from A to F.

This method is machine-dependent, as it makes use of specific ASCII codes, and while it will work on most home computers it will not work on all of them. The Sinclair machines, for example, do not use the ASCII codes. However, it is easy to convert the program so that it does not depend on the particular code used to represent the characters. If we add:

```
10 LET CS = "0123456789ABCDEF"
240 LET H$ = MID$(CS, D+1, 1)
+ H$
and delete lines 250 and 260 the
program will work on any
machine with Microsoft Basic
regardless of the character code
used. It still will not work on a
Sinclair ZX81 as Sinclair BASIC
does not have the MID$ function.
However, in Sinclair Basic line
240 can be replaced by
240 LET H$ = CS(D+1) + H$
```

DEFINING CODES . . .

What we are doing in the second method is, in effect, defining our own code so that the code used in the machine is irrelevant to the working of the program.

In most applications we have to define our own representation for the data because the machine does not provide exactly what we want.

As an example, consider the problems of representing playing cards in a program. Some home computers have graph symbols for the suits but others do not; in the latter case we can

use the letters C,D,H,S, as easily remembered abbreviations.

A card-playing program will have to accept cards input from the keyboard, perform various operations on the cards, and display cards on the screen, and these three phases may require entirely different representations of the cards and hence require conversion between the different representations.

For example a card may be typed in as CA, held as the number 14 for calculations concerning the play, and displayed on the screen as a picture of the Ace of Clubs.

The programmer will have little choice in the input and output forms as these must be easily recognised by the user, but the internal form may be chosen in many ways differing in both representation and organisation.

The choices of an internal form suitable for the operations that must be carried out can make a great difference to the ease or difficulty with which the program is designed and coded.

STORING CARDS . . .

One method of storing cards which simplifies many operations is to use a string array in which the array elements are the input forms and the array indices are used either as numeric codes for the cards or as pointers to another array giving numeric codes.

For example, we could define a string array P\$(52) with P\$(1)="CA", P\$(2)="C2", . . . , P\$(13)="CK", P\$(2)="DA", . . . , P\$(52)="SK".

We can then use a simple routine to check that what the player has typed in is actually a valid card:

```
100 INPUT C$
110 LET I = 1
120 IF C$ = P$(I) THEN GOTO 200
130 LET I = I + 1
140 IF I < 53 THEN GOTO 120
150 PRINT "NOT A VALID CARD. TRY AGAIN"
160 GOTO 100
200 . . .
```

If the program began by dealing the player's hand we must also check that the card he typed in was included in the hand he was dealt.

On exiting the above routine I points to the array element corresponding to the card typed in, which with P\$ as defined means that the cards are coded as CA=1, C2=2, etc.

This simple method of obtaining a numeric code may be all that is needed for some purposes. For example, to sort a hand we can simply sort the codes into ascending order and when we convert the codes to strings by looking up the P\$ array we will find all cards of the same suit together and in order from Ace low to King high.

Other orders can be catered for by defining P\$ differently. If we want the cards sorted into suits and in order from two low to Ace high we define P\$(1)="C2", P\$(2)="C3", . . . , P\$(12)="CK", P\$(13)="CA", P\$(14)="D2", . . . ; if

we want the hand sorted with cards of the same rank together regardless of suit we define P\$(1)="CA", P\$(2)="DA", P\$(3)="HA", P\$(4)="SA", P\$(5)="C2", etc.

In many card games we will need to separate the suit and value of a card, and possibly perform some manipulations with the value.

If we store the cards in an array such as P\$ the suit can be found easily as S\$ = LEFT\$(P\$(I), 1) and a numeric code can be devised from this if necessary.

It is usually more complicated to deal with the rank or value of the cards; it is rare to find a card game that requires any operation on the suits other than ordering or testing for equality, and sometimes for colour. However, different card games require a wide range of operations to be carried out on the ranks or values of the cards and there are frequently special cases.

GAMES YOU CAN PLAY

If we look at a few games we can see some of the necessary operations and special cases that affect the suitable representations of the cards.

CRIBBAGE

Points are scored for cards in sequence, with 10, J, Q, K entering into sequences in that order, so it would appear that these cards can be given a value of 10, 11, 12, 13 respectively. However, points are also scored for combinations of cards totalling 15 and in this case 10, J, Q and K all count as 10. Thus we need a different representation for J, Q, K according to what we are doing.

POKER

A run of five cards may have an Ace as the high card or the low card, but cannot have an Ace in the middle. Thus, A, 2, 3, 4, 5 and 10, J, Q, K, A count as runs, but J, Q, K, A, 2 does not. However, elsewhere in the game Ace is always high. Probably the easiest way of dealing with this anomaly is to include a special test for runs of the type A, 2, 3, 4, 5.

BLACK JACK

The aim of the game is to get

the highest total without going over 21, where 2 to 10 count as the spot value, J, Q, K count 10, and A may count as either 1 or 11 as the player wishes. In evaluating a hand it is necessary to allow for the two different values that may be assigned to an Ace.

BRIDGE

In the bidding the suits rank from low to high, Clubs, Diamonds, Hearts, Spades, No Trumps. In the play, however, there may be a trump suit, in which case a card of the trump suit ranks above cards of any other suit whenever it is played in a trick. To allow for this we need a valuation of the cards that may change from hand to hand.

Where we have a straightforward ordering of the cards in a suit, whether from Ace low to King high as in Cribbage, or from two low to Ace high as in Bridge, it is possible to calculate the rank of a card from its position in the P\$ array.

For example, using the third definition of P\$ above, LET R = INT((I+3)/4) would give R the value 1 when I was 1, 2, 3 or 4 (i.e., for an Ace), 2 when I was 5, 6, 7 or 8 (i.e., a Deuce), etc.

FULLER FD SYSTEM FOR ZX80/81

THE MOST VERSATILE SYSTEM FOR EXPANDING YOUR ZX

STANDARD KEYBOARD AND CASE

This splendid keyboard and case houses your ZX81 printed circuit board, which is simply screwed into place, the keyboard plugs into the ZX. You can now enter data with ease. The 40 key switch board is a custom unit not made up out of other manufacturers parts. The keytops are our own design and have the ZX Qwerty and functions foil printed onto them. Access to the user port, TV, MIC, and ear sockets are as per the ZX case.

Built keyboard and case £36.70 or £30.70 as a kit plus £2.10 postage and packing.

EXTENDED KEYBOARD AND CASE

The case is designed to house not only the keyboard and ZX but also our motherboard, power supply, RAM cards and two other boards, not necessarily of our manufacture. The injection moulded case measures 200 mm x 350 mm x 60 mm and houses a 42 keyswitch board, the extra keys can be assigned to other functions. The case is supplied with a "Power On" LEO.

Built keyboard and case £39.95 or kit £33.95 plus £2.50 postage and packing. Motherboards £15.95 plus 80p postage and packing. 16k RAM board £35.95, 64k RAM board £79.95.

Keyboard Only Available!

Built £24.95

Kit £18.95 (+P.P. 80p)

Not Only
30 Programs for
the Sinclair
ZX 81:1K -

Machine Language Programming Made Simple for the Sinclair -

A complete beginner's guide to the computer's own language - Z80 machine language. Machine language programs enable you to save on memory and typically give you programs that run 10-30 times faster than BASIC programs.

Sinclair ZX 81 ROM Disassembly

by DR. I. LOGAN.

The definitive book for the programmer that needs those answers about the Sinclair ZX 81 ROM.

ESSENTIAL ZX81

Not only over 30 programs, from arcade games to the final challenging Draughts playing program, which all fit into the unexpanded 1K Sinclair ZX 81 but also notes on how these programs were written and special tips! Great value!

Understanding Your ZX 81 ROM -

A brilliant guide for more experienced programmers by Dr. Ian Logan. This book illustrates the Sinclair's own operating system and how you can use it. Includes special section on how to use machine code routines in your BASIC programs.

The Complete Sinclair ZX 81 BASIC Course

At last, a comprehensive text for your Sinclair ZX 81! The complete BASIC Course is a manual which will immediately become an indispensable work of reference for all your ZX 81 programming.

ULTIMATE ULTIMAX

In Las Vegas everybody's talking about the Ultimax, Commodore's new games machine. This \$149.95 system has a higher specification than the VIC-20, which is twice the price. We can expect it in Europe in the summer with a price tag of around £99.

The Ultimax is a programmable colour computer which connects directly to the TV. It has a membrane keyboard like the ZX81 and can be programmed in Basic. It uses both plug-in cartridges — not VIC-20 compatible — and cassettes and uses some of the VIC-20 peripherals — like joysticks, paddles and light pens. It does not have any expansion ports, and is not planned to take any communication, disc or printer peripherals.

It has a polyphonic sound generator, and an overlay keyboard turns it into an electronic organ similar to Casio's early VL-Tones.

Commodore have signed an agreement with Bally to transfer some of their arcade games to VIC-20 and Ultimax cartridges. Ultimax has a resolution at least twice that of the VIC-20, with a 40 column by 25 row character screen.

The VIC-20 has some exciting new programs, including VIC Avenger, a copy of the original arcade game, Slots — which is a very realistic slot machine, Poker, Jupiter Lander, Super Alien, Midnight Drive and Magic Mouse.

An 8K memory expander and a cheap modem (\$109) have also been released for the VIC-20. It now has a big brother, the VIC-20 16, which has a 16K memory as standard. Also introduced is the Commodore 64, a 64K colour computer that looks just like the VIC-20, has a 40 column screen, runs all VIC peripherals and all Ultimax cartridges. This is priced at \$595 — say £395 when it eventually reaches the home market.

american

ALL AT YOUR FINGERTIPS

The Texas Touch and Tell is a game based on the original Speak and Spell. This one is aimed at younger children, and instead of a keyboard, a series of overlays present pictures, letters, numbers and shapes.

The machine then asks the player to touch the appropriate drawing and responds accordingly. With the success of the Speak and Spell, and its other systems like the Little Professor, Texas Instruments is going all

out for the educational game market.

A new cheaper Speak and Spell — the Compact — has just been introduced and costs only \$45.

Texas Instruments have also introduced 26 new software packages for the 99/4 computer. These include T.I. Invaders; Cat Wars, Adventure, Munch Man, Speak and Spell and Speak and Math, lots of educational software, and business aids.

TIGER'S NEW GAME PLAN

One company that made its debut in 1981 was Tiger Electronic Toys. Their systems are just available in the UK.

They have introduced some hand-held games which include a built-in clock. The models have animated figures and the LCD displays use multi-coloured graphics. They also have sound effects.

CaveMan involves getting a lit

tle caveMan past a ravenous dinosaur which is between you and the cave. Just to make life interesting you also have to dodge random lightning bolts.

King Kong involves saving a lady held captive by a giant gorilla on top of the Empire State Building. In Space Flight you defend your space fleet from the invaders.

Monster Maze has joystick control and full colour animation and involves avoiding a monster whilst getting to the centre. Finally, Dragon involves saving maidens from a tower while at the same time avoiding a fire-breathing dragon.

Tiger also have a couple of educational games based around their K-Z-8 talking learning computer. These cartridges now consist of subjects such as geography and grammar. They have also introduced a talking picture book which looks very similar to the Texas Instruments Teach and Tell.

NOW WATCH THIS SPACE

General Consumer Electronics have looked around for some novel games to bring to the market. They have succeeded with a new range of wrist watch size games.

Arcade Time has Hypeblast, Planet Raiders, Galaxy Gunner and Cosmic Clash. Game Time has Fling Squad, Missile Strike, Alien Assault and Blast Away. Whist Sports Time has Football, Basketball and Soccer. They also tell the time!

The animated LED displays occupy an area of just 1" x 1".

Casio introduced a whole range of calculators that sing, tell for tunes, play games, tell the time

and even calculate! They included a calculator that sounds like ten different instruments, a calculator that is really a mini tube player piano that can store up to 240 notes and then play them back automatically, one that has three different games, and one that simulates a boxing ring.

The MG777 has three built-in games in addition to the usual calculating facilities. The games include Digicube, Digislot and Trackdown. Digicube is quite difficult and involves getting all nine squares filled up with a preset number, in a preset number of moves.

Each press of a key adds one to the randomly arranged sequence. Digislot is a slot machine game and Trackdown involves

Pictured is the U.S. Games Corp's tabletop arcade game Super Football. This game is based on American football.

following lighted squares on the keyboard. Model BG8 has a built-in boxing ring when the game is activated. Two boxers appear in the display area of the unit.

It is up to the user to knock out the contender by pressing various keys on the calculator. As both fighters exchange punches, the unit automatically keeps score.

Commodore
COMPUTER

PINBALL IS BACK IN STYLE

their way back to their traditional haunts in pubs and arcades. Pinball is back — brighter and brasher than ever.

The video boom almost wiped out this denizen of the amusement parlour — but behind the scenes the pinball makers were working out a way to beat Space Invaders and video machines at their own games.

Added by the microprocessor, a new generation of "pins" were born. And now you'll believe that pinball can talk! They challenge, encourage and even insult the player using a wide vocabulary of electronic utterances.

Between the Xenon machines' sensuous tones that invite you to, "Try me again!", to the Medusa's fierce "Challenge the Medusa!" there are a variety of words and phrases the dedicated pinball player can wring from his favourite machine.

But how did pinball bounce back? Computer and Video Games visited the Wembley headquarters of Bally Conti-

See me, feel me, touch me, hear me! ... demand the loud, flashy machines which have quietly found

PINBALL

them with video games. Now there's a shift back to pinball.

One of the first machines Bally produced in their fight against the video games was cheekily called Space Invader — and it produced sounds just like the video game of the same name.

"Kids get to a certain level on a video machine. Say they score 10,000 points every time on their favourite machine, and they keep on scoring 10,000 points. They get so good that they become bored with it.

"With pinball, no two games are the same. They could score 10,000 one game and an embarrassingly low score the next time they play. They keep coming back to play again to beat the machine."

He adds that pinball designers now concentrate on building more features into machines to test the skills of the players.

Features like captive balls only released when targets are hit in the correct sequence, multi-level playfields and skill shots which send the players' scores soaring.

There are machines which send several balls rocketing down the playfield at the player during a game — just to keep him on his toes.

With the voice, revamped sounds and lights and the skill features these new pinball machines are in good shape to give the video games tough competition to the arcades, claims Adams.

"Pinball is always going to have knobs. It's seen it all

before. There's always going to be pinball."

TARGETS TO TEST YOUR SKILL

The new neon-bright pinball machines have plenty of surprises in store for the uninitiated who step up to sample their delights.

Experienced players like in the ingenuity used in the design of the machines. Multiball features are a big favourite — but tests of skill in whatever form they appear on the playfield, are essential if a pinball is going to be a winner.

Players also like to get clear instructions on the machines — about target sequences or bonus features and how they can get them. On some

machines you can simply bash the ball around the playfield and not know why lights are flashing or if you've collected bonus points.

Players face a real challenge if they step up to one of Bally's latest pinball creations called Centaur. This sinister looking machine — it is resplendent in horror show black and white artwork — is packed with skill features.

Unique to the machine is a feature called equiballs multiball. What that means is that each player has to build up his own store of balls for multiball play, getting on advantage from the skills of a previous player.

The play centres around releasing captive balls. This is achieved by hitting a configuration of targets with O.R.B.S. lettering.

Hit in sequence these release a captive ball. Hit out of sequence they store up a number of possible captive multiballs in the machines memory — to a maximum of four.

These can be released by shooting the right passageway when it is lit.

The Centaur also has one other disconcerting feature — it plays itself. When no-one has approached its coin-slot for what it regards as an unfriendly length of time it blasts out five balls and sends them rocketing around its own playfield — just to get a bit of attention.

If this singular machine's flipper buttons are pressed when the game is over it speaks out — listing its skill features to anyone who will listen while colour coded lights flash in unison.

Elektra is another Bally machine men to be seen in the arcades. This has a novel three level playfield — with a mid-

Pictures by Linda Freeman

amental — one of the big three pinball manufacturers and distributors. There we talked to David Adams, managing director of Bally's operation in this country.

"The video boom gave pinball a shot in the arm," Adams told us. "It encouraged the evolution of the machines.

"I've been in the business 20 years and it's incredible the way they have developed. The new games are tremendous — quality-wise and player-wise.

"These years back, arcade managers were taking out their pinball machines and replacing

field at its heart. This can only be resorted by collecting Elektra "time-units" on the upper levels.

It has two captive balls — on the top and second levels — which are released after targets are hit in the correct sequence. Once on the mini-field players can earn up to 195 thousand points on its bonus features.

Multiple flippers feature on Baby's Medina game which has a two-level playfield. It also has a useful shield post located between the lower flippers which — if you've built up enough bonus points — enables you to save a doomed ball with a touch of a button. It also laughs at you when you lose a ball — which can be very irritating!

THE BIG THREE TABLE TOPPERS

The big three pinball makers are all American — Bally, Gottlieb and Williams, with a fourth, Stern taking some of the market. There is also a Spanish manufacturer — but their products are specifically for that country.

The biggest market for pinballs is — of course — in the USA. Germany and France are also pinball provinces on the Italian. In comparison, Britain is still a small market for the machine makers.

Bally — based in Chicago — has a large design team working on new themes and designs for its products.

Prototype designs are tested on site before the pinball factories swing into production of a new model. One of the new microprocessor models would cost the buyer around \$1,000 — but second-hand models can be picked up for around £300. Older, electro-mechanical models can be found for less.

HOW THE PINBALL GAME OF AGE

In its late 50s heyday, pinball was a really simple machine with a few pot-bumpers and a couple of flippers, controlled by one-dimensional artwork on the playfield and backwash.

Inside it was full of electro-mechanical levers and switches — a real plumber's nightmare. These machines are now collectors' items and Bally often get requests for parts and spares for vintage machines from pinball enthusiasts.

Nowadays pinballs are controlled by a microprocessor

like the Motorola 6800 which masterminds absolutely everything.

One of the most successful companies, Bally, claims it will be changing this microprocessor soon in order to cut down on the number of matrix boards inside the machines.

Artwork is now a big feature

PLAYING ON THE SMALL SCREEN

Microcomputers have taken pinball out of the arcade and given it a screen image.

Now that colour has become an integral part of so many home computers, the game can be brought to life to your own living room. It can still be an exhilarating game although the action bears little resemblance to the feel of a buzzing machine beneath your outstretched fingers.

Computers do have certain advantages, however, and Tandy has brought out an exciting innovation for its TRS-80 Colour Computer ver-

sion and, depending on the version of pinball, the player is given a different number of balls with which to bump up his score.

Pinball is also available on television game centres, although they are not the most popular of the range. Philips has a version for the G7000, ACE does a pinball game for the Acetrone MPU 1000, and Voltmire produces one for the Database game centre.

RASTER BLASTER DOWN TO ZERO

The T.J. 99/4a computer also has a pinball cartridge similar to the Tandy version giving a custom-designed game. This is called Zero Zap. You have to set up your own field positioning on it diamonds and crosses to increase your chances of scoring points. This game differs from the original arcade game because you have to aim on an arrow which you control at a target, either diamonds or crosses, and fire. When you score a direct hit the diamonds change into crosses, and vice versa.

One of the best standard computerised pinball games is an American one on sale in the UK. It has the memorable name Raster Blaster and is available through Apple software dealers including Zynar and SBD Software of Richmond. Pat Salt of Zynar said: "It's really pretty good. Of the pinball machines I have played I think Raster Blaster is as good if not better than some to arcades."

"The flippers in arcade games haven't always worked when you want them to, or as quickly. With Raster Blaster they are very prompt and easy to control and handle."

Other computers are well-catered for on the pinball front, on well. Cassettes ranging in price from £4.50 up to top-of-the-range discs with sophisticated sounds and graphics to the £16 range, are proving popular with software buyers, on the home market follows the arcade trend.

of the pinball with elaborate designs decorating the backwash — the artwork on the machine's scoreboard — and playfield.

Bally produced a machine called Lost World with an Adventure/Fantasy theme — and received orders for the backwash alone for people to hang on their walls. Some were stolen from exhibition stands.

What will the future offer? Yet more mind-boggling playfields and tests of the players' skill. One of the newest machines, yet to be seen in arcades, is the Vector.

This has a shooter lane which fires the ball out at an angle onto the lower playfield — if you are lucky or skilful enough it whips up a chute to the top level.

sion of the game.

This cartridge will allow the player to design his own table.

He decides how many flippers in each game, where they should be positioned and the degree of difficulty involved in the game.

In the past computerised pinball games have fallen short of the arcade machines but this now seems to be changing.

Computerised pinball is represented on the screen in several ways. As a table layout, complete with mushroom shaped bumpers with the different scores marked on them, gates which open and close at random intervals and bats which represent the pinball table's flippers.

Most of the games have sound effects which enhance

ZX81 HEWSON CONSULTANTS ZX81

HINTS & TIPS For the ZX81 by Andrew Hewson £4.25
Good value and sure to assist a very responsible way of equipping months of programming experience. **YOUR COMPUTER** Nov 81. Excellent, very good value for money. **SYN**

Screen Space — Understand the Display File — Converting ZX80 Programs — Changing Programs — Data between programs — Call a suboutine from another — Switch data file — Machine Code Programs (write, load, edit, save and delete machine code). Routines and programs are assembled liberally throughout the book and the first chapter consists of twelve useful, interesting and entertaining programs.

16K RAM PACK £37.50
A top quality and on 16K dynamic memory specially designed for the ZX81. Simply plug into the port at the back of your Stiler. Can be used as a cartridge with the ZX printer. Neatly packaged in a black plastic shell to match your ZX81. Incredible value, why play more!

Z80 OP CODES £1.45
A must for the beginner and the experienced programmer alike. This handy ready reference lists all 100 plus Z80 machine code instructions in decimal and hexadecimal with the meanings. Each Op Code is accurately explained and cross referenced. Supplied in a protective transparent wallet for easy reference and durability.

PROGRAMMERS TOOLKIT (4K) £6.50
Are you writing your own programs for the ZX81? Then use our TOOLKIT to do the dirty work. Copy it into RAM before you start work (the you will have it at your fingertips). Comprehensive file RENAMER, including GOTOs and GOSUBs, LOAD, EDIT and RUN machine code programs. **PROJECT** the ZX81 system manual. COPY them into RAM and PATCH and/or EXTEND them. FIND a given page of Basic code and REPLACE all occurrences of a move blocks of Basic code with EDIT.

STATISTICS (1K) £3.75
Three programs on the one cassette
1) **Statistics** — prints the current mean and standard deviation for each value is entered.
2) **Regression** — prints the current mean and standard deviation of the y and x values and the intercept and slope of the regression line.
3) **Trend** — prints the current mean and standard deviation of the y and x values and the intercept and slope of the trend line.
4) **CHI-SQUARED TEST** — prints the current value of the Chi squared statistic and the current sample size.
5) **GRAPH PLOT** — plots a graph of data entered from the keyboard.

AVALON HILL MICROCOMPUTER GAMES

No less than 10 thrilling, action packed games on cassette, suitable for use with Pet, TRS 80 and Apple computers. And our latest titles include programs for the Atari.

TANKTICS

A unique game which uses a board and counters as well. The computer moderates combat and movement and keeps records letting you plan your strategy in this classic tank vs tank battle.

£15.95 + £1.80 p&p

Also available in this series

ARTIC COMPUTING

MOVING AHEAD WITH ZX SOFTWARE

ZX CHESS I reduced to £6.50

Very popular machine code program, with six levels of play and an analysis option. Unbeaten except by

ZX CHESS II now only £12.99

A new improved version with a faster response time, seven levels of play and in addition a recommended move option.

ADVENTURES

Exciting machine code games with instant response: choose from the range below

ADVENTURE 'A' £6.00 You find yourself stranded on an alien planet. Can you reach your ship and escape?

ADVENTURE 'B' £7.00. In a jungle clearing you come across an Inca temple. You must break in, collect treasure and escape alive. Beware! Includes a cassette save routine.

ADVENTURE 'C' £8.00. You are unfortunate enough to be drawn to an alien cruiser. Can you reach the control room and free yourself or will they get you first? Includes a cassette save routine.

GALAXY WARRIOR £6.00

Fast and exciting interactive animated graphics game. Hunt Clingons and go through black holes.

GALAXIANS £6.50

All the features of the arcade game in a fast machine code program, sweeping attacks, explosions and personalised scoring.

1K GAMES PACK £6.00

and many more. For a catalogue giving full details, please send a s a a 10-

ARTIC COMPUTING

396 JAMES RECKITT AVENUE, HULL HU8 0JA

DOWN TO BASIC DOWN TO EARTH

BY MOIRA NORRIE

VARIABLE VALUES . . .

There are many occasions when it is desirable to perform a calculation in a program without immediately printing the result. It may be that the value produced is only an intermediate value in some calculation, or, the value is to be stored for use later in the program — it would be wasteful to perform the calculation more than once.

The LET statement is used to allocate a value to a variable. The general format of the LET statement is

```
<line no.> LET <variable> = <arith. expr.>
```

The operation of the LET statement can be described as follows: the arithmetic expression on the right of the "=" is evaluated; the resulting value is then assigned to the variable on the left of the "=". Assume that a program has three variables A, B and C. At some point in the execution of the program A has the value 2, B has the value 5 and C has the value 3.5. If the next statement is:

```
80 LET S = A + B + C
```

then after this statement has been executed, the value of variable S will be 10.5 and the values of A, B and C will be unchanged.

If the computer now encounters:

```
90 LET A = A + 1
```

then the following sequence of events occurs:

the computer first looks up the current value of A and finds "2", this value will be copied into the part of the computer that performs arithmetic; it then adds on "1" to get the value "3" for the arithmetic expression. On examination of the variable name on the left of the "=" it stores the value "3" for A — thus

overwriting the old value of A with the new value.

The statement:

```
90 LET A = A + 1
```

therefore means, increment the value of A by 1.

Last month, I gave an example of a program to count the number of words with four letters that were typed in. In that program, I used a statement similar to the one above to increment the count each time a four-letter word is input.

Another common use of the LET statement to update the value of a variable, is the idea of maintaining a "running total" in a program. I will now look at an example of a program that uses this technique.

A football team wants a program to calculate their average crowd attendance in a season of 40 games. The outline of the program would be:

```
running total = 0
```

```
repeat 40 times
```

```
  input no. in crowd
```

```
  let running total = running
```

```
  total + no. in crowd
```

```
end repeat
```

```
let average = running total/40
```

```
print results
```

In many versions of Basic, the first line is not essential since all variables are assigned the value "0" initially. When a variable is used as a count or a running total, a vital part of the logic of the program is that the variable should be initialised to "0" — it is a matter of convenience that most versions of Basic automatically perform the initialisation for us. Although the calculation of the average could be included in the Print statement, I shall put it in a separate LET statement so that the Print statement is less cumbersome.

AVOIDING MISTAKES

```
10 REM CALCULATE AVERAGE
20 REM CROWD ATTENDANCE
30 FOR I = 1 TO 40
40 INPUT N
50 LET T = T + N
60 NEXT I
70 LET A = T/40
80 PRINT "AVERAGE CROWD
ATTENDANCE ="A
90 END
```

Even this simple program could be extended. One improvement would be the use of printing messages to tell the user what the format of the data typed in should be. Examples of this were introduced last month. Another improvement would be the inclusion of data checks.

I am sure you are all well aware of how easy it is to make typing mistakes. A great problem in computing is the detection of such errors in the data. Some errors are very difficult to detect — for example, someone might type their age as "22" instead of "33" — however, others are easier to detect — for example, a person typing their age as "322" lies outside the possible range of values.

Let's assume in my previous example that the maximum crowd that the ground could hold is 20,000. Then the value of N should lie in the range 0 to 20,000. The section inside the FOR loop could be extended to

```
40 INPUT N
44 IF N<0 THEN 54
48 IF N>20000 THEN 54
50 LET T = T + N
```

```
52 GOTO 60
54 PRINT "ERROR -- PLEASE
RETYPE"
56 GOTO 40
```

A further check is that N should be an integer value. This can be done using the function INT — INT(N) returns the integer part of N.

If N has an integer value, then INT(N) will equal N. I can therefore introduce one more statement in the loop:

```
42 IF N<>INT(N) THEN 54
```

For reasons of brevity, I am unable to include all these data checks in my sample programs.

COMMON USAGE

I have already used the functions INT and RND in the series. A number of commonly used functions are available in Basic as standard functions. This saves the programmer having to write his own programs (or parts of programs) to evaluate such functions. The standard functions provided will often depend upon the power of the version of Basic.

In the table, I have listed the most common standard functions and briefly described their use. As many of them are mathematical, I can only suggest that you ignore those you don't understand!

Wherever the function operates on a value — enclosed in brackets after the function name — that value may be given as a constant, a variable or an expression. For example:

```
INT(6 = RND+1)
```

```
LEN("CAT")
```

Note that brackets are not required after the function name on the Sinclair ZX81.

TABLE OF STANDARD FUNCTIONS

Function	Description	Example
INT	integer part	INT(3.2) = 3
ABS	absolute value	ABS(-) = 2
SGN	the sign of a number	SGN(-2) = -1
SQR	square root	SQR(4) = 2
LOG	natural logarithm	LOG(2) = 0.69315
EXP	exponential function	EXP(1) = 2.71828
SIN	sine (radians)	SIN(0.5) = 0.47943
COS	cosine (radians)	COS(0.5) = 0.87758
ATN	arctangent	ATN(1) = 0.78540
LEN	length of string	LEN("CAT") = 3
RND	pseudorandom number between 0 and 1	RND = 0.217873

However, you should include them in any programs you write. Don't assume that someone running your program won't make mistakes or deliberately try to sabotage your program!

The IF statement tests whether a specified condition is true. So far, the conditions have been simple in that they only involved one test. For example:

```
N<0
or N<>INT(N)
```

a specified range. In my example, I had an error condition if either N was less than 0 or N was greater than 200000. This required two IF statements — lines 44 and 48 of my program. It is possible to combine these into one IF statement:

```
45 IF N<0 OR N>20000 THEN 54
```

Thus, simple conditions can be combined using "OR" to form complex conditions. If any of the simple conditions are true, then the whole complex condition will be true and a jump will be made to the given statement.

It is also possible to check that a number of conditions are all true by combining them with "AND" in a single IF statement.

```
115 IF NS = "SMITH" AND
A = 20 THEN 200
```

could be used to identify persons with the name SMITH and age 20.

COMPLEX CONDITIONS

It is possible to have more complex conditions that involve a combination of simple conditions. This is particularly useful when testing that a value lies in

NEXT ISSUE SYSTEMS SUMMARY

When moving to a new computer system, or converting programs from one system to another, it is useful to have a summary of the main features of the version of Basic used.

In each future issue, I will provide a reference table for one particular system. The table will outline the main differences between standard Basic and the version used on that system. It is envisaged that most of the popular systems will be included. Next month, I will start by looking at the Sinclair ZX81.

NEXT ISSUE

Adventure

TO SCROLL OR NOT SCROLL

What is the best way to use the screen to display your adventure? Sooner or later in writing an adventure you must decide whether to use the conversational scrolling technique or a whole screen approach.

The disadvantage of scrolling becomes obvious when the player has to recall details of his location, which can soon become tiresome. As soon as the machine reply is decided it may be screened with a PRINT statement, and the program looped back to the INPUT line.

However, I prefer to clear the screen and redisplay the location details together with the machine's reply. In my opinion this gives a more polished appearance to the game, the player having more relevant information displayed at any one time.

It is also useful to display the

player's last command — if the computer's reply is a bit mystifying he can check what it was responding to, a typing error maybe?

If the screen is cleared when INPUT is received, and PRINT statements executed as each piece of information to be displayed is available, the presentation will look very jerky, leaving the player in a state of nerves waiting for the whole thing to crash! This can be avoided if all the replies are assigned to variables and only when all are set is the screen cleared. All these variables can now be screened at once, providing a smooth change and giving the illusion of speed, since the screen is never really blank.

Using Q1\$ for the reply, the lines 3000 to 3050 described last month will look like:

```
3030 LET Q1$ = 'IMPOSSIBLE':
GOTO 100
```

Between lines 100 and 150 we will insert some IF statements later. Using OT\$ and OW\$ for the objects, display coding will now look like this:

Make the most of your Sinclair ZX Computer...

Sinclair ZX software on cassette.

£3.95 per cassette.

The unprecedented popularity of the ZX Series of Sinclair Personal Computers has generated a large volume of programs written by users.

Sinclair has undertaken to publish the most elegant of these on pre-recorded cassettes. Each program is carefully vetted for interest and quality, and then grouped with other programs to form a single-subject cassette.

Each cassette costs £3.95 (including VAT and p&p) and comes complete with full instructions.

Although primarily designed for the Sinclair ZX81, many of the cassettes are suitable for running on a Sinclair ZX80 - if fitted with a replacement 8K BASIC ROM.

Some of the more elaborate programs can be run only on a Sinclair ZX Personal Computer augmented by a 16K-byte add-on RAM pack.

This RAM pack and the replacement ROM are described below. And the description of each cassette makes it clear what hardware is required.

8K BASIC ROM

The 8K BASIC ROM used in the ZX81 is available to ZX80 owners as a drop-in replacement chip. With the exception of animated graphics, all the advanced features of the ZX81 are now available on a ZX80 - including the ability to run much of the Sinclair ZX Software.

The ROM chip comes with a new key-board template, which can be overlaid on the existing keyboard in minutes, and a new operating manual.

16K-BYTE RAM pack

The 16K-byte RAM pack provides 16-times more memory in one complete module. Compatible with the ZX81 and the ZX80, it can be used for program storage or as a database.

The RAM pack simply plugs into the existing expansion port on the rear of a Sinclair ZX Personal Computer.

Cassette 1 - Games

For ZX81 (and ZX80 with 8K BASIC ROM)

ORBIT - your space craft's mission is to pick up every valuable cargo that's in orbit around a star.

SNIPER - you're surrounded by 40 of the enemy. How quickly can you spot and shoot them when they appear?

METEORS - your starship is cruising through space when you meet a meteor storm. How long can you dodge the deadly danger?

LIFE - J. H. Conway's 'Game of Life' has achieved tremendous popularity in the computing world. Study the life, death and evolution patterns of cells.

WOLFPACK - your naval destroyer is on a submarine hunt. The depth charges are armed, but must be fired with precision.

GOLF - what's your handicap? It's a tricky course but you control the strength of your shots.

Cassette 2 - Junior

Education: 7-11-year-olds

For ZX81 with 16K RAM pack

CRASH - simple addition - with the added attraction of a car crash if you get it wrong.

MULTIPLY - long multiplication with five levels of difficulty. If the answer's wrong - the solution is explained.

TRAIN - multiplication tests against the computer. The winner's train reaches the station first.

FRACTIONS - fractions explained at three levels of difficulty. A ten-question test completes the program.

ADDSUB - addition and subtraction with three levels of difficulty. Again, wrong answers are followed by an explanation.

DIVISION - with five levels of difficulty. Mistakes are explained graphically, and a running score is displayed.

SPELLING - up to 500 words over five levels of difficulty. You can even change the words yourself.

Cassette 3 - Business and Household

For ZX81 (and ZX80 with 8K BASIC ROM) with 16K RAM pack

TELEPHONE - set up your own computerised telephone directory and address book. Changes, additions and deletions of up to 50 entries are easy.

NOTE PAD - a powerful, easy-to-run system for storing and

retrieving everyday information. Use it as a diary, a catalogue, a reminder system, or a directory.

BANK ACCOUNT - a sophisticated financial recording system with comprehensive documentation. Use it at home to keep track of 'where the money goes', and at work for expenses, departmental budgets, etc.

Cassette 4 - Games

For ZX81 (and ZX80 with 8K BASIC ROM) and 16K RAM pack

LUNAR LANDING - bring the lunar module down from orbit to a soft landing. You control attitude and orbital direction - but watch the fuel gauge! The screen displays your flight status - digitally and graphically.

TWENTYONE - a dice version of Blackjack.

COMBAT - you're on a suicide space mission. You have only 12 missiles but the aliens have unlimited strength. Can you take 12 of them with you?

SUBSTRIKE - on patrol, your frigate detects a pack of 10 enemy subs. Can you depth-charge them before they torpedo you?

CODEBREAKER - the computer thinks of a 4-digit number which you have to guess in up to 10 tries. The logical approach is best!

MAYDAY - an answer to distress call, you've narrowed down the search area to 343 cubic kilometers of deep space. Can you find the astronaut before his life-support system fails in 10 hours time?

Cassette 5 - Junior

Education: 9-11-year-olds

For ZX81 (and ZX80 with 8K BASIC ROM)

MATHS - tests arithmetic with three levels of difficulty, and gives your score out of 10.

BALANCE - tests understanding of levers/fulcrum theory with a series of graphic examples.

VOLUMES - 'yes' or 'no' answers from the computer to a series of cube volume calculations.

AVERAGES - what's the average height of your class? The average shoe size of your family? The average pocket money of your friends? The computer plots a bar chart, and distinguishes MEAN from MEDIAN.

BASES - convert from decimal (base 10) to other bases of your choice in the range 2 to 9.

TEMP - Volumes, temperatures - and their combinations.

How to order

Simply use the order form below, and either enclose a cheque or give us the number of your Access, Barclaycard or Trustcard account. Please allow 28 days for delivery. 14-day money-back option.

CVG04

Sinclair ZX81 Personal Computer the heart of a system that grows with you.

1980 saw a genuine breakthrough – the Sinclair ZX80, world's first complete personal computer for under £100. Not surprisingly, over 50,000 were sold.

In March 1981, the Sinclair lead increased dramatically. For just £69.95 the Sinclair ZX81 offers even more advanced facilities at an even lower price. Initially, even we were surprised by the demand – over 50,000 in the first 3 months!

Today, the Sinclair ZX81 is the heart of a computer system. You can add 16-times more memory with the ZX RAM pack. The ZX Printer offers an unbeatable combination of performance and price. And the ZX Software library is growing every day.

Lower price: higher capability
With the ZX81, it's still very simple to teach yourself computing, but the ZX81 packs even greater working capability than the ZX80.

It uses the same micro-processor, but incorporates a new, more powerful 8K BASIC ROM – the 'trained intelligence' of the computer. This chip works in decimals, handles logs and trig, allows you to plot graphs, and builds up animated displays.

And the ZX81 incorporates other operation refinements – the facility to load and save named programs on cassette, for example, and to drive the new ZX Printer.

Every ZX81 comes with a comprehensive, specially-written manual – a complete course in BASIC programming, from first principles to complex programs.

Kit: £49.⁹⁵

Higher specification, lower price – how's it done?

Quite simply, by design. The ZX80 reduced the chips in a working computer from 40 or so, to 21. The ZX81 reduces the 21 to 4!

The secret lies in a totally new master chip. Designed by Sinclair and custom-built in Britain, this unique chip replaces 18 chips from the ZX80!

New, improved specification

● Z80A micro-processor – new faster version of the famous Z80 chip, widely recognised as the best ever made.

● Unique 'one-touch' key word entry: the ZX81 eliminates a great deal of tiresome typing. Key words (RUN, LIST, PRINT, etc.) have their own single-key entry.

● Unique syntax-check and report codes identify programming errors immediately.

● Full range of mathematical and scientific functions accurate to eight decimal places.

● Graph-drawing and animated-display facilities.

● Multi-dimensional string and numerical arrays.

● Up to 26 FOR/NEXT loops.

● Randomise function – useful for games as well as serious applications.

● Cassette LOAD and SAVE with named programs.

● 1K-byte RAM expandable to 16K bytes with Sinclair RAM pack.

● Able to drive the new Sinclair printer.

● Advanced 4-chip design: micro-processor, ROM, RAM, plus master chip – unique, custom-built chip replacing 18 ZX80 chips.

Built: £69.⁹⁵

Kit or built – it's up to you!

You'll be surprised how easy the ZX81 kit is to build: just four chips to assemble (plus, of course the other discrete components) – a few hours' work with a fine-tipped soldering iron. And you may already have a suitable mains adaptor – 600 mA at 9 V DC nominal unregulated (supplied with built version).

Kit and built versions come complete with all leads to connect to your TV (colour or black and white) and cassette recorder.

puter-

16K-byte RAM pack for massive add-on memory.

Designed as a complete module to fit your Sinclair ZX80 or ZX81, the RAM pack simply plugs into the existing expansion port at the rear of the computer to multiply your data/program storage by 16!

Use it for long and complex programs or as a personal database. Yet it costs as little as half the price of competitive additional memory.

With the RAM pack, you can also run some of the more sophisticated ZX Software – the Business & Household management systems for example.

Available now- the ZX Printer for only £49.⁹⁵

Designed exclusively for use with the ZX81 (and ZX80 with 8K BASIC ROM), the printer offers full alphanumeric and highly sophisticated graphics.

A special feature is COPY, which prints out exactly what is on the whole TV screen without the need for further instructions.

At last you can have a hard copy of your program listings – particularly useful when writing or editing programs.

And of course you can print out your results for permanent records or sending to a friend.

Printing speed is 50 characters per second, with 32 characters per line and 9 lines per vertical inch.

The ZX Printer connects to the rear of your computer – using a stackable connector so you can plug in a RAM pack as well. A roll of paper (65 ft long x 4 in wide) is supplied, along with full instructions

How to order your ZX81 BY PHONE – Access, Barclaycard or Trustcard holders can call 01-200 0200 for personal attention 24 hours a day, every day.
BY FREEPOST – use the no-stamp-needed coupon below. You can pay

by cheque, postal order, Access, Barclaycard or Trustcard.
EITHER WAY – please allow up to 28 days for delivery. And there's a 14-day money-back option. We want you to be satisfied beyond doubt – and we have no doubt that you will be

TAKE A SPIN DOWN THE ALLEY

TENPIN

Tenpin bowling must be one of the last sports which would seem suitable for compensation.

It says a lot for computer games designers that they have come up with a version which recreates the need for a good eye and judgement, and still manages to be entertaining.

The screen shows the tenpin lane from the viewpoint of the bowler with the machinery, and the 10 pins that are to be knocked over in the distance.

The rules of tenpin bowling are simple, but for those not familiar with them, adequate instructions are included with the program.

A ball is rolled down an alley with the aid of the computer's two arrow keys and the space bar. Markings, a third of the way down the alley, assist in aiming the ball, and a spin can be given to the ball any time up to it reaching the pins. A game consists of 10 frames per person, you are allowed up to two balls per frame to knock down the 10 pins. The computer keeps your score, and displays this, together with any "strikes" or "spares" (knocking over all 10 pins with one or two balls respectively) at the end of the lane, to the left of the pins. To the right of the pins is shown a plain view of the pins remaining standing.

At the end of the game the scores for each player is shown and you have the option of taking part in another game.

There can be between 1 and 4 players and the game has the added affect of sound available through an amplifier.

As usual the Tandy graphics are a limiting factor with this simulation, though not as seriously in this game as in others, and should not spoil the enjoyment. A more serious problem is the fact that the ordinary user would find it difficult to take a backup copy of the program.

Distributor Molmerx is to be praised in supporting his soft-

were so should a copy be spoiled, a new one would be provided, but it would have been nice to have the facility (such as there is on the original adventure game) to make one

backup copy.

Tenpin is available from Molmerx for the Tandy TRS-80, Models I and III and Video Game, models I and II. The tape version costs £10.93 and the disc version, £14.95.

AMAZING JOURNEY THROUGH PREHISTORY

Wandering around the fairground sidashows, I heard a barker enticing the crowd to roll-up and see the prehistoric monster.

I paid up and entered the tent only to be enveloped in a grey mist which transported me back into the era of that mightiest of beasts, Tyrannosaurus Rex.

Exploring tentatively, I stopped at an intersection and looked around me. Then came the sound of approaching footsteps. I ran, turning this way and that but there, looming above me, was the dreaded monster. The huge jaws opened to reveal his great teeth. I could just make out something inside. I started to read "You have been posthumously awarded 130 points and sentenced to roam the maze forever. If you wish to appeal, press 'stop' else press 'cont'." I pressed 'cont'. I might get out this time.

3D Monster Maze, is the best game I have seen for the Sinclair ZX81.

The grey and black walls of the maze provide the 3D effect and the graphics make Tyren-

3D MONSTER MAZE

nosaurus Rex look suitably frightening as it paces toward you. The maze corridors are constantly changing as you press the 5, 7 or 8 keys to walk forward or turn the corners. There is a way out of the maze but I have only managed to find it twice. If you do manage to exit then your score is increased accordingly. It would be nice to have a high score facility included in the program, though.

The play can be speeded up or slowed down if you alter the listing slightly. Instructions on how to do this are included in the notes supplied with the cassette.

I have found myself wandering around the maze with the monster lying in wait, somewhere end not wanting to come out. It does give you a chance to find the exit, but it does take away some of the fun. This did not happen very often though. This program then can be highly recommended and is available for a 16K ZX81 from J. K. Grey Software on its games tape 4 and costs £5.95.

SPADE AND SHOVEL WORK

ALIEN

A monster infested maze is the playground for a defensive deathgame.

The only way to survive in Alien is to dig holes at strategic spots in the labyrinth. When one of the killer red aliens falls into your trap, you can finish him off by quickly filling it in.

Using the keyboard controls this game is awkward to play — joysticks are better. The keys to operate your man are bunched together and to move him up, down, left or right needs some getting used to.

It's impossible to get around this by using two fingers from each hand to manoeuvre the man about because you must work the 'A' and 'D' keys to activate the digging action with your left hand.

Points are scored by killing off the aliens, but it varies randomly sometimes it could be 200, sometimes 300.

Alien requires concentration to work out the best places to dig your holes without harming you (you could be devoured by a monster). Don't dig holes which are too far apart. If you have a long way to move your man into position by the time you reach the hole containing the floundering monster it will be too late. He only remains vulnerable for a few seconds.

Not one of the most graphically exciting of games for the VIC-20 from Commodore but will keep you busy for a while. Price £19.95 from VIC software dealers.

MICRO-GEN

JOYSTICKS FOR THE ZX81 AS SEEN AT THE ZX MICROFAIR

* THE MOST EXCITING DEVELOPMENT EVER FOR THE ZX81 * TURNS YOUR ZX81 INTO A TRUE PROGRAMMABLE GAMES MACHINE * FREE YOURSELF OF THAT DEAD, UNRESPONSIVE KEYBOARD * PLAY INTERACTIVE GAMES WITH IMMEDIATE RESPONSE * CONTROLLER BOARD FITS IN BETWEEN THE RAM PACK AND THE ZX81 (NO SKILL IS REQUIRED TO MAKE THIS CONNECTION AND IT ACTUALLY IMPROVES THE STABILITY OF THE RAM PACK) * UP TO 2 JOYSTICKS MAY BE ATTACHED TO THE CONTROLLER BOARD SO ALLOWING 2 PLAYERS TO PLAY GAMES AGAINST ONE ANOTHER * THIS ADD-ON EXTENDS THE CAPABILITY OF THE MACHINE — IMAGINE THE TREMENDOUS VARIETY OF GAMES THAT NOW BECOME POSSIBLE * DETAILS SUPPLIED ON HOW TO USE THE JOYSTICK IN YOUR OWN PROGRAMMES

For the games presently available you will require a controller board price £19.50 and 1 joystick, price £3.80. Please add £0.80 p&p.

VoxBox

the product that speaks for itself!

Speech adds a new dimension to computing and the Mutek VoxBox, unlike most other systems, gives the capability to generate unlimited vocabulary speech from your computer. The unit is easily programmed via a parallel or serial port and a version is available for most popular computers. The principle of phoneme synthesis is used and, because phonemes are the "building blocks of speech", all English words and a large number of foreign language components may be easily constructed.

An increasing range of software is available to enable quick and easy sentence construction. The hardware is supplied complete and tested with inbuilt power supply and connectors for your computer.

Versions range from £65 for connection to PET, Apple, TRS-80, Video Genie, OSI, UK101, VIC and Acorn with no hidden extras for connecting leads, free demonstration software and excellent documentation.

Listen before you buy

We can honestly say the quality is nearly as good as human speech, so why not call us after 6pm and listen to our computer talking through VoxBox. You may place a credit card order or a request for further information after the message.

Graphics

IMAGES ON AN APPLE

The high-resolution graphics facilities of the Apple can be used to create and manipulate shapes. This can be done on any microcomputer with high-resolution graphics.

However, on the Apple, shapes can be represented and stored in a special way so that they may be drawn, erased and transformed more quickly than is possible with other macros. Animation using high-resolution images can be achieved much more realistically and impressively on the Apple than on any other machine.

The way in which images have to be stored when using the Apple appears rather awkward at first, but in fact it is no more difficult than any other way of

use the special features.

The facilities needed by a programmer to create graphic effects are all available, and the user who wants to do so can create his own graphics system.

The first diagram shows how a shape is represented, so that it can be stored and the special Applesoft commands can then be used to draw and transform it.

The simple bat shape shown in (a) is decomposed into simple vectors which all have the same length but which point north, south, east or west, as in (b). The vectors making up the shape are then "unwrapped" as in (c) and are then coded. The coding table is

Fig 1

which it starts should be placed in the locations with hexadecimal addresses E8 and E9.

When a shape is stored in this way, the following commands can be used.

DRAW *t* AT *X*, *Y* draws shape number *t* in the shape table starting at the screen location in column *X* and row *Y*. **XDRAW** *t* AT *X*, *Y* similarly erases a shape.

ROT = *N* causes a shape to be rotated clockwise according to the value of *N*. *N* = 0 gives no rotation, while *N* = 16 gives a rotation of 90 degrees. In this way, *N* gives the rotation in units of approximately six degrees. **SCALE** = *M* causes scaling. *M* = 1 gives reproduction at the original size; *M* = 2 doubles the size by doubling the length of each vector in the shape. The maximum value for *M* is 255.

With these commands, animation can be achieved by repeatedly establishing a position, drawing the shape and then erasing it.

Figure two was produced by the program:

```
10 HGR: HCOLOR = 3
20 FOR I = 1 TO 3
30 X = 50 * I: Y = 100
40 DRAW t AT X Y
50 NEXT I
```

Figure 3 resulted from:

```
10 HGR: HCOLOR = 3
20 ROT = 0: SCALE = 24
30 FOR I = 1 TO 3
40 X = 50 * I: Y = 70 - 15 * I
50 DRAW t AT X Y
60 ROT = 64 - 3 * I: SCALE = 24 - 4 * I
70 NEXT I
```

Fig 3

representing and storing an image and is soon mastered.

If you want to achieve realistic animation, the effects that the Apple can give are amazing. No system which relies on Basic alone, possessing no comparable special features, gives anywhere near the same speed of execution.

Of course, if you are more interested in creating graphics than in looking at them, you may feel that the Apple makes it too easy by doing all the interesting work, but then you don't have to

given in (d), and the order in which the vectors are coded and written down is shown in (e). The coded form of the shape is to be stored in eight-bit memory locations. Since the code for each vector has three binary digits, two codes can be stored in each location while the remaining pair of binary digits in each location are both zeros as shown in (e). The resulting table of binary digits is given as (f).

In (g) this table has been translated to hexadecimal and given a header and an end marker, and this is the shape table which represents the bat shape.

The shape table can be loaded into any convenient part of the memory where it will not be over-written, and the address at

Fig 2

Missile Command

Together, Mike Chalk and Kansas
 bring you not just another Arcade game

... an EXPERIENCE!

YOU command the ground-to-air missiles to save the cities from total Alien destruction, progressing to TEN levels of difficulty from not-so-easy to bloody impossible. Multiple displays with five types of Aliens and Satellite Bomber. Each type of Alien attacks on a different trajectory, even splitting and changing course without warning.

Based on the Arcade game of the same name, this is really the finest computer game of its kind available today. It demands quick responses and no small amount of skill to overcome the Aliens even at the lower levels of play. As the game proceeds, so does the risk of total annihilation, giving at last, a very, very competitive game indeed, and one which will satisfy even the very skilled gamesman.

Very spectacular explosions and sound effects complete the realism. Infinite mid-air 'split' control giving movement in every direction.

PLAYING YOUR CARDS RIGHT

The eurocard is a versatile aid to those of you building your own circuits. Unlike other types of matrix board it has been designed especially for the use of chips — but it can also be used for discrete components.

The eurocard comes in various sizes and designs depending on the supplier and the use to which it is to be put. Some types allow for an edge connector and others for rack mounting. The most commonly used by hobbyists just has a double row of holes at each end of the board to allow pins to be inserted and wired to.

The tracks, which run on both sides of the board, are designed to accept chip holders of any standard size. You should be prepared, however, to buy special wire-wrap holders if you are using chips with more than 20 pins, as these will take up all of the solder pads on some of the boards. It is possible, in this case, to solder wires on to the pins of the holder to make connections on the underside of the board, but this is not recommended.

Most boards have a pair of power lines which are placed conveniently across the top and bottom of the card where the chips are designed to go. By a single short link to the chip the necessity of individual wiring is done away with. Be certain though to make these connections to each chip first as it is possible to mistake later wiring for these.

If I am using one of the eurocards for a prototype circuit I lay it out in an orderly manner with chips evenly spaced across the board making it easy to see where I have already wired connections.

This, however, may not be possible with, say, a memory board which is required to fit into a very restricted space but may, nonetheless, have a large number of chips of various sizes.

For a low density card the

method of wiring can either be by soldering single- or multi-stranded, insulated conductor or by wire-wrapping using the special cable.

In the case of high density boards the most satisfactory means of making connections is to wire-wrap, and sometimes it is the only practicable method. The idea behind this process is that with extended pins on the chip holders the wire can be wound around, either manually or by the use of a hand tool, to make the connections.

It means that the holders, which previously had to be

spaced, can now be placed almost on top of each other, thus making the size of card required for the design much smaller, saving space and money.

WRAPPING THINGS UP

There are, as I said, two slightly different methods of wire-wrapping. The first, and easier, is to take a very light gauge insulated wire, strip it and wind it around the base of the pin. Do not wind over the top of a previous solder as you may need to unwrap it if you have gone wrong. Even so you should wind the wire around a minimum of three times, so that if there are more than two connections to be made on the same pin there is enough space left.

There is a tool specifically designed for this purpose, looking very much like an inverted needle. There are, however, a number of different models so try them before picking one.

Using the wire-wrap tool makes light work of an often difficult job. The battery operated tool cuts the job time in half — if you know how to use it correctly.

The idea is to wrap an insulated wire around the pin at a very high speed but low torque. The square edges of the pin cut through the insulation and a cold forged weld is formed. This is a great improvement on the

soldered contact although the number of times you can remove the join to remake it is limited.

As with the other methods, the first connections made should be the power lines. You can then be sure that it is a chip that has gone down and not just lack of power.

It is a good idea to loom the power lines, as it is with data or address lines. That is to say, a single is taken from the power point on the card to the first pin, terminated, and then from that pin to the next, and so on and so forth across the board. Beware of over-loading the conductor if you are using too many chips, or high-powered ones.

Designing your own circuits, building them and getting them to work can be very rewarding, but unless you have an idea of how to go about it you can be stumped very easily. By choosing the right method you can cut out a large amount of the hassle involved. Experience will tell you which way is best.

TABLET

A GUIDE TO THE LOW-COST COMPUTERS A

ATOM Cambridge based Acorn Computers manufacture the Atom machine which has a memory capacity of 2K, but it can be upgraded to 12K.

It must be plugged into a television and is available in either kit form or ready built. As a kit it costs £120 for the 2K computer or £150 for the finished product. For a more powerful system, 12K, the price stands at £220 (in kit) and £250 completed.

Acorn also makes the Systems 1, 2 and 3 which cost between £69 and £750.

APPLE The Apple has a solid software base for both business and entertainment applications. The machine comes with a memory capacity ranging from 8-48K. You can buy joysticks and paddles to plug in for use with computer games. Colour graphics can be used with a colour television.

The 48K machine costs £695 and is obtainable from Apple Computer U.K., formerly Microscience which is based in Hemel Hempstead, Hertfordshire.

ATARI 400/800 Most of the software for the Atari microcomputers are games or educational, with business applications only recently being introduced.

The basic 400 with 16K RAM costs £340 direct from Atari's UK distributors, via London-based Ingersoll Electronics. The 32K version sells for £395. Peripherals for the machines, like disk drive units and cassette recorders can also be obtained from Ingersoll for £325 and £45 respectively. The 800 is expandable to 48K and the 16K machine sells for £345.

BBC MICRO COMPUTER The computer adopted by the BBC to sell in conjunction with its forthcoming series is based on the Acorn Proton. The BBC has developed its own Basic to be used on the machine. Minimum memory is 16K RAM, maximum being 32K. Present plans for the machine are dual purpose, both business and games. Optional extras include joysticks, paddles, disk drives and a cassette for tape loading.

Price is put at £235 for the 16K computer and £335 for the 32K version.

DAI This is a personal computer made by Data Applications for both business use and home entertainment. The U.K. system (it is made in Belgium) has 48K RAM as well as full colour and sound commands. Data Applications is based in Cirencester, Gloucestershire. The 48K system now costs £955.

MICROTAN 65 Tangerine Computers Systems produce this machine for games and personal use, like household accounts. It comes in kit form and is expandable from an initial 1K memory up to 48K RAM. The Microtan 65 costs £79.35 for the 1K kit, or £90.85 assembled from the Ely based firm.

NASCOM There are two Nascoms available at the moment, both can be used for business and games. The Nascom 2 is the more powerful of the two with 8K RAM and with a Basic interpreter.

It can be bought in kit form and off the shelf complete. The kit is £125 for 1K RAM and £140 for the finished 1K product. £225 will secure an 8K kit. Nascoms are available from Warwick-based Lucas Logic.

NEWBRAIN This is a hand-held computer unit which is at the low end of the price bracket. For 2K RAM you pay £155 upwards and it is expandable to 20K of memory. Hobbyists often opt for this machine because of its low cost and it is used for general business and for playing games. An expansion unit is available which supports floppy disc drives, a printer and a visual display unit. It is available from the Grundy Group.

OHIO SCIENTIFIC Ohio Scientific (OSI) makes the Superboard which is aimed at the hobbyist market. Its memory capacity starts at 4K RAM and is expandable to 32K if you buy the add-on board.

Other machines in this family include the Challenger 1 and 4. These are essentially cased versions of Superboard. The Challenger 4 is the cheapest of these at £575 and includes colour and sound options.

PET Made by Commodore Business Machines, the Pet ranges from 8K RAM to 32K RAM. It is used mostly by small businesses for general applications but has a hobbyist following. It is available from Commodore of Slough at a starting price of £450. Compatible peripherals are available for the Pet, including disk drives, cassettes for loading tapes and printers.

SHARP MZ-80K Popular with both business and home users, the Sharp's memory capacity starts at 16K and has a top limit of 48K. It comes with a monitor and a cassette recorder built onto the keyboard unit. Disk drives are also available. Manchester-based Sharp Electronics have a recommended retail price of £460 for the 48K unit.

CORE

AVAILABLE IN THE UK

SHARP PC-1211 The smallest computer in the Sharp range, Sharp classifies it as a pocket computer and it is programmable in Basic. It also has a cassette interface for loading and costs upwards of £285

SINCLAIR There are two types of Sinclair's microcomputer available for under £100. Sinclair really brought the microcomputer into the home. The machines are ideal for learning the rudiments of computing but are limiting graphically. The ZX80 has 1K of memory and is expandable up to 8K, but is no longer in production. The ZX81 sells for £49.95 for 1K in kit form or £69.95 ready assembled. The 16K RAM packs costs £49.95

SORCERER The Exidy Sorcerer is a home computer with a sizeable games following but it is one of the more expensive of the microcomputers, costing upwards of £749. Memory amount ranges from 48K to 55K but there is a plug-in ROM pack for extra capacity. Disc drives and visual display unit are an additional cost. Sorcerers can be obtained from a Cornish firm, Liverpool of St Ives

TANDY TRS-80 Tandy's TRS-80 Model 1 is a machine which is often used for games and is well-supplied with software for both entertainment and business applications. Its memory capacity goes from 4K to 16K but there is an expansion unit available upgrading it to 48K if you want the extra memory. The Model 1 is the cheapest of the Tandy range.

The Model 1 costs £459 but comes complete with a monitor to use as a VDU, and a cassette. The Model III is an integral unit made up of a keyboard, 12" screen and two slots for 5 $\frac{1}{4}$ " discs. It costs from £499.

TANDY TRS-80 COLOUR COMPUTER Tandy's latest addition to its range of computers is the Extended Basic Micro Colour Computer (or TRS-80 Colour Computer for short). It is available with either 16 or 32K of memory and costs £449

The actual computer unit consists of a keyboard which can be plugged into any television set. It is aimed at both business and games users and Tandy has bought out a variety of instant loading games program packages for the machine.

Joysticks needed to play some of the games are extra and cost £17.95 a pair. The colour computer can be obtained from Tandy stores nationwide

TI-99/4A This computer has recently been launched by Texas Instruments. It consists of a separate keyboard with graphics facilities in full colour and now plugs in to a U.K. television. Software available for it from Texas Instruments is mostly business and educational but the firm has recently introduced a bundle of games to run on the computer. It has 16K RAM and uses tapes, discs or plug-in games cartridge. You can buy one of these from Bedford-based T.I. for £299 or from your local dealers

VIC-20 The VIC is the much-publicised baby of the range of microcomputers from Commodore of Slough. At £185 it is one of the cheapest. Delivers to dealers has just started. The VIC has full colour graphics on a colour TV, and there are joysticks available. Although Commodore are plugging the business use of the machine it is tipped to be a hot games computer because of its colour graphics and low cost.

VIDEO GENIE The Genie is made by E.A.C.A. and is a popular games machine. It is compatible with the Tandy TRS-80 Model 1. With 16K to 48K RAM there are disc drives available. The basic unit costs from £369 and is available from Lowe Electronics of Matlock in Derbyshire

GENIE II The replacement computer for the Video Game is now available. The Genie II is an upgraded version of the Video Game and has full upper and lower case machine language monitor, additional Basic, has a sound unit and is cassette based. It is being aimed at the serious hobbyist market and costs £229. A disc version is available, called the Game II and sells for £310 for the unit, £199 for the expansion box needed, and £225 for each disc drive.

UX 101 This machine comes in either kit form or ready built with memory capacity of 4K to 40K (with an expansion board). It contains television and cassette interfaces so you don't need a VDU. The UX 101 is a popular computer for playing games and there is a lot of software around for it. The kit costs £149 for 4K, ready built it sells for £199

SOFTWARE GAMES

A beginner's guide to

ADVENTURE A type of game in which the player has to take a character role and retrieve a number of treasures or objects by a trial and error process giving instructions to the computer. The "hero" (or player) encounters a variety of hazards often taking the form of dangerous monsters, wizards and animals. Some adventure games are so complex that they take weeks, or months, to solve.

ALGORITHM A process or set of rules to carry out a task or solve a mathematical problem.

ARRAY A series of items (data or information) arranged to form a meaningful pattern.

ARROW KEYS The keys on a computer keyboard marked with arrows. Used for moving the cursor across, or up and down the V.O.U. screen.

ASSEMBLY LANGUAGE A language built up with memory codes designed to make programming easier.

BUG A slang term given to a mistake in a computer program which prevents it from working. It can also refer to a mechanical, electrical or electronic defect in a computer.

BYTE A term to measure a number of Bits (Binary digit), usually eight bits to a byte.

CAPACITOR An electronic component.

CHARACTER STRING A sequence of characters in a row.

CHIP A tiny piece of silicon which holds all the components that make up a microprocessor.

COMMAND In writing programs this word refers to an instruction word which specifies an operation which the computer must perform.

COMPUTER LANGUAGE Languages are used to make the computer perform operations. They consist of instructions or commands. There are different types of language for carrying out different tasks.

CONVERSATIONAL SCROLLING Data displayed on the screen, involving step-by-step communication between the user and the computer.

DEDICATED CHIP A chip (microprocessor) which has been specially programmed to perform a single or special group of applications, e.g. computer games. ROMs are usually the means by which dedicated chips are developed.

DISC A magnetic storage device. It can be either a hard or floppy disc. Hard discs can usually store more information than floppy discs and are used with mainframe computers.

DISC DRIVE A unit which is connected to the computer, used for loading the information stored on discs into the computer.

DISC STORAGE The method of storing information on discs as opposed to cassettes.

EUROCARD A type of printed circuit board suited to circuits with a large number of chips.

FLOATING POINT This is a notation used for the calculation of numbers in which the arithmetic point, binary or decimal, is movable but not necessarily the same for each number.

FUNCTION A special purpose or characteristic action.

GRAPHICS The name given to pictorial representation of data.

HARDWARE The general term given to all pieces of electronic and mechanical devices which make up a computer system, i.e. the actual machines.

HIGH RESOLUTION GRAPHICS A method of using Basic commands to move a drawing head to any position on the screen and drawing a line between two specified points. This facility is available on several makes of microcomputer. These graphics can be recreated in greater detail and to a higher degree of accuracy.

INPUT Information (data) fed into a computer.

INTEGER A number which does not contain a decimal point, i.e. a whole number.

INTERACTIVE A word used to describe a system which is capable of real-time man-machine communications.

K Abbreviation for kilobyte.

KILOBYTE A measurement of memory capacity. 1024 bytes of memory. So 8K is equivalent to 8192 bytes.

LANGUAGE See "Computer Languages".

L.C.D. (Liquid Crystal Display) A display containing liquid crystals which light up when electricity touches them. Used in calculators and watches.

L.E.D. (Light Emitting Diode) Provides a simple display and consists of an electron tube which lights up when electricity is passed through it. Used

The best enhancement yet for the ZX enthusiast - for just £9!

What is the best way to guarantee that you never become bored with your Sinclair computer?

The answer is to subscribe to Sinclair User ... written specifically for owners of ZX 80's and ZX 81's. Sinclair User is the latest monthly from ECC Publications - pioneers of Practical Computing, WHICH COMPUTER?, and Computer & Video Games. Whether you bought your system yesterday or are an old hand, you are probably an enthusiast for your machine. And your biggest problem is likely to be obtaining all the information to satisfy your interest. We promise that Sinclair User will be devoted entirely to quenching your thirst for information.

Issue one is Published on 1 April and is an absolute must for Sinclair devotees. So make sure you guarantee that you get your copy by taking out a subscription now.

As the name suggests, the content will be geared specifically to helping the user. There will be pages of information on available hardware and software. Our expert writers will analyse established products to help

you make the right choice. There will be exclusive pre-release snippets on products which are about to hit the market. Our aim is to make Sinclair User invaluable and we will chronicle applications which are of special interest.

For example, in the first issue we will look at business applications and we visit a school where the pupils are having the time of their lives using their Sinclars. Each month we will carry eight pages of programs. Another must for every user is our first-rate helpline service. And we intend to carry as much information as possible about clubs.

Last but not least let us say that the best way you can guarantee you like the magazine is by participating yourself. Don't forget to ask us your queries; send in your programs - for which we will pay £10 if we publish - and be sure to tell us if you are using your ZX 81 in a special way. Send in your club news and tell us of any interesting people out there in userland. And just in case you need further convincing, look at the editorial plans for the first six issues.

Can you continue to get the most out of your ZX without reading the Sinclair User? So why not fill in the subscription order form today?

ingenious ...but lonely!

Buying your first Genie I microcomputer is just the start of a long and enthralling adventure, for it won't be long before you will want to expand your system with some of the wide range of peripherals which make up the complete Genie System.

Firstly there is the **Expansion Box**, which immediately expands your Genie's capacity to 256K RAM, and up to 48K RAM if required. It can be connected to 4 disk drives, a printer, RS232 interface or 8100 cards.

Then there is the **Printer**,

a compact unit with 80 column, 5 x 7 matrix print-out, which connects to your Genie through the Expander, or via the Parallel Printer Interface.

The **Disk Drive** gives you greater storage capacity and full random access file handling, with the option of double-density through a special adapter. New Dual Disk Drive now available!

Finally, there is Genie's very own **12" Monitor**, a must if you want to let the rest of the family watch their TV in peace! Available in B & W or green tube.

The supreme advantage of the Genie I system is its compatibility with the TRS 80, which means that literally 1000's of pre-recorded programs are already available, just waiting to be plugged into your Genie!

The recent improvements in the Genie system, including Extended Basic, sound unit and machine language monitor, make it the ideal system for the committed hobbyist, and an excellent and easy-to-use educational tool.

**SPECIAL TECHNICAL GENIE
HOT - LINE ON 0629 4995**

For all your technical advice and service back-up on any aspect of the Genie system direct from the experts!

Please send me FREE, 16 page colour brochure on the Genie Computer System I enclose 25p postage
